

# MEETING DOCUMENT

## Wadden Sea Board (WSB 35)

10 March 2022  
Leeuwarden

---

<b>Agenda Item:</b>	<b>5.1 World Heritage</b>
<b>Subject:</b>	<b>Progress report of the single integrated management plan</b>
<b>Document No.:</b>	WSB 35/5.1/2
<b>Date:</b>	17 February 2022
<b>Submitted by:</b>	<b>TG-WH and CWSS</b>

---

WSB 33 (August 2021) endorsed the TG-WH proposal to postpone the Consultation Phase to allow for more time to discuss and refine activities for the SIMP key topics. WSB 33 advised to define activities as concrete as possible seeking ambition and articulating policy and site management in the SIMP (WSB 33 Summary record link).

The attached draft SIMP version 0.8 presents a complete document. It includes *Section 5. Towards a Sustainable Management* with activities defined in an iterative and participative process involving site managers, the respective TWSC groups and considering the ISWSS recommendations and the advice from the WSB 33 as well as a revised *Section 3. Nature Conservation Management*.

The content of the draft Wilhelmshaven Declaration and the draft SIMP version 0.8 has been coordinated and aligned in such a way that they do not contradict each other. However, deviations in the wording result from the different periods of validity of each document, the degree of concretisation and the political focus. In the course of the revision of the two documents up to the 14<sup>th</sup> Trilateral Governmental Conference, both will be fully harmonised, taking into account their different functions (see WSB 35/6/1 Trilateral Governmental Conference 2022).

**Proposal:** The meeting is invited

1. To **endorse** the draft SIMP version 0.8 for the Consultation Phase (Annex 1).
2. To **endorse** the proposal for the SIMP Consultation Phase.
3. To **note** the proposed revised roadmap.
4. To **note** the input from IUCN on the draft SIMP content and process of development and their further involvement during the planned Consultation Phase.

## 1. Draft SIMP version 0.8 for the Consultation Phase

The draft SIMP version 0.8 (Annex 1) is a complete document. All the open questions have been addressed and discussed by the TG-WH in cooperation with many members of the TWSC family. The draft SIMP version 0.8 has reached an advanced stage and is ready for the Consultation Phase.

While coordinating the content of the draft Wilhelmshaven Declaration and the draft SIMP, the aspect of the extent to which the TWSC should lead the implementation of the EU Biodiversity Strategy objectives focusing on strict protection has been raised. The results of the discussion in agenda item WSB35/6/1 Trilateral Governmental Conference 2022 will be reflected in the improvement of the current activity 7 in the Section 5.1 Key Topic Fisheries:

Activity 7. The TWSC to produce a coordinated proposal to contribute to reaching the objective of the EU Biodiversity Strategy for 2030 of at least one third of the protected area for strict protection.

TG-WH considers that the draft SIMP version 0.8 has achieved a great detail in content, but also considers that there is room for some more ambition. The upcoming Consultation Phase through the participation of stakeholders could lead to more ambition.

**Proposal:** To **endorse** the draft SIMP version 0.8 for the Consultation Phase (Annex 1).

## 2. The SIMP Consultation Phase

The Consultation Phase aims to inform the advisory boards and stakeholders in their networks in the region and to ask for their suggestions. The draft SIMP version 0.8 will be translated to Danish, German, and Dutch and will be accompanied by a cover note.

The cover note is to describe the status and purpose of the SIMP and its relation to other management instruments, especially to the WSP 2010. Also, to emphasize that the key topics' proposed activities intend to maintain or improve the current standards, and under no circumstance to lower them.

Finally, the cover note will include the following concrete questions:

- Do the activities under the SIMP key topics reflect what is most important and necessary?
- If not, could you please add detail to the current activities or add potential complementary activities?

The note will invite to propose amendments and add comments but also includes the request to not rewrite the text, add new chapters, add more key topics, or restructure the document.

As with the Ministerial Declarations, the national parties organise the consultation process at the national levels. It is proposed that CWSS organises the consultation process with the trilateral and/or international bodies: WSF, WST, and IUCN.

The SIMP Consultation Phase is planned to take place between March and mid-June. The input from the Consultation Phase will be carefully studied and discussed by the TG-WH to produce an updated version of the SIMP for WSB 37 consideration and endorsement for its adoption by the Trilateral Governmental Council.

**Proposal:** To **endorse** the proposal for the SIMP Consultation Phase.

### 3. Proposed Revised Roadmap

Date	Milestone
10 March 2022	<b>WSB 35</b> Release of the draft SIMP version 0.8 by the Wadden Sea Board for stakeholder participation in the Consultation phase.
March-(mid) June 2022	<b>Consultation phase:</b> Substantive involvement of the Advisory Boards, Policy Board, WST and WSF, and site managers.
28 April 2022	<b>WSB 36</b> No document regarding the SIMP is to be expected.
<b>June 2022</b>	TG-WH study and discuss input from the SIMP Consultation Phase for SIMP update.
June-July 2022	Update the content of the draft SIMP considering the comments received during the Consultation Phase. Language checks, edit and layout of the SIMP document.
26. August 2022	<b>WSB 37</b> endorses the SIMP for adoption in the Ministerial Conference.
November 2022	Adoption by the Trilateral Governmental Council at the 14th Trilateral Governmental Conference in Wilhelmshaven.

**Proposal:** To **note** the proposed revised roadmap.

### 4. Input from IUCN on the draft SIMP content and process of development

TG-WH invited the IUCN World Heritage Conservation Officer Katherine Zischka to an informative presentation and conversation regarding the SIMP on Friday 28 January 2022. The TG-WH offered an overview of the content of the SIMP and emphasized the importance of the iterative and participative nature of the process of development.

IUCN welcomed the invitation, the presentation and the questions from TG-WH. Ms Zischka provided a very positive feed-back on the work so far on the SIMP, especially acknowledged the integrative and comprehensive process of development and its aim to strengthening a coordinated management of the Wadden Sea World Heritage Site.

Regarding the content she recognized that the SIMP focuses on the Outstanding Universal Value and covers all relevant aspects including the existing and potential threats directly affecting the property and their cumulative and combined effects (i.e. from climate change and the five key topics).

IUCN, through Ms Zischka, offered their support with requests in the World Heritage context and will provide suggestions to the SIMP version 0.8 during the time frame of the SIMP Consultation Phase.

**Proposal:** To **note** the input from IUCN on the draft SIMP content and process of development and their further involvement during the planned Consultation Phase.

# Single integrated management plan (SIMP)

## Wadden Sea World Heritage

Draft version 0.8

Authors: Trilateral Wadden Sea Cooperation (TWSC)

**This publication should be cited as:**

# Executive Summary

The global importance of the Wadden Sea as the largest unbroken intertidal back-barrier sand and mudflat ecosystem in the world, the longstanding conservation efforts of the Trilateral Governmental Cooperation of the three Wadden Sea States and the support from the Wadden Sea region and its stakeholders are recognised by its World Heritage status. With the inscription of the Wadden Sea on the UNESCO's World Heritage List as transboundary site, came the request by the World Heritage Committee to develop a single integrated management plan (SIMP) with the purpose of further facilitating the continuous improvement of transboundary management coordination for the protection and maintenance of the Outstanding Universal Value (OUV).

The SIMP provides a clear overarching description of the nature conservation management structures in Denmark, Germany, and the Netherlands and at the trilateral level. It also describes how existing management elements are implemented trilaterally in the context of a continuous cycle of adaptive management.

In the process of developing the SIMP, five topics were prioritised as of high importance for joint management to maintain the integrity of the Site. These key topics were identified in an iterative and participative process that included the selection criteria of urgency, direct effect on the OUV and need to address at the trilateral level submitted in the Leeuwarden Declaration (2018), the Wadden Sea's

site managers' recommendations, and a prioritisation by Task Group World Heritage. These topics are also mentioned by the World Heritage Committee in the Statement of Outstanding Universal Value as needing continuous attention. Pending management tasks and activities are suggested for all key topics based upon the site managers', experts', and policy makers' proposals to give possible further steps.

The SIMP also presents the complementary activities to support management in the Wadden Sea and shows how the Trilateral Wadden Sea Cooperation (TWSC) is addressing the overarching effects of climate change. The SIMP highlights the Wadden Sea World Heritage Site's global role and its link to global responsibilities. Cooperation with partners in the area and globally is instrumental in and supportive of the long-term protection of the Wadden Sea.

The single integrated management plan (SIMP) for the Wadden Sea is a political agreement within the Trilateral Wadden Sea Cooperation (TWSC), meaning it is a legally non-binding document of common political interest. Existing policy documents and legally binding instruments at the trilateral, regional, national, or local level are not altered or affected by the SIMP. The SIMP is complementary to the Wadden Sea Plan 2010 (WSP).

The main target audiences of the SIMP are decision and policy makers and the site managers working in nature conservation of the Wadden Sea area in the three countries. Further important target

audiences are environmental NGOs and other strategic partners, the scientific community, the administrations from socio-economic sectors (e.g. education, fisheries, tourism and shipping) addressed in the SIMP, and the local population.

The SIMP will be revised regularly (every 10-12 years) by the Wadden Sea Board (WSB) presenting the opportunity to adapt the SIMP based on the outcomes of the trilateral monitoring and assessment programme as well as management requirements of the TWSC, including the selection of key topics, with the support and participation of all parties involved in implementing the plan. It is intended that the SIMP review will be aligned as much as possible with other process.

Different trilateral groups and site managers from Denmark, Germany, and the Netherlands were involved in the process of developing the SIMP. The SIMP went through a consultation phase in the three countries before its adoption at the Trilateral Governmental Conference in Wilhelmshaven 2022.

## Main messages

- The management system of the Wadden Sea World Heritage Site is a combination of the existing national protection and management systems and the trilaterally coordinated management of the Cooperation Area. By providing a clear and up to date overview of

the existing administrative nature conservation structures and their legal basis, the SIMP aims to improve the understanding of the Wadden Sea World Heritage management system.

- Climate change adaptation measures in the Wadden Sea are guided by the Trilateral Climate Change Adaptation Strategy (CCAS) towards a climate resilient Wadden Sea ecosystem. Mitigation measures aim towards developing the Wadden Sea Region into a CO<sub>2</sub>-neutral area by 2030. CO<sub>2</sub>-reduction policies and plans at the national and regional levels include the transition to renewable energy. Further proposals for management activities require the further operationalisation of the CCAS, as well as improved communication of the World Heritage value and climate change effects in relation to economic, social, and cultural values, and trilateral knowledge exchange and interdisciplinary discussions.
- The SIMP key topics are related to human activities relying on ecosystem services and taking place inside of and adjacent to the World Heritage property. The five key topics are: 1) Fisheries, 2) Tourism, 3) Shipping and Ports, 4) Renewable Energy and Energy from Oil and Gas and 5) Coastal Flood Defence and Protection.
- The Statement of Outstanding Universal Value as adopted by the World Heritage Committee in 2014, notes that these topics may pose threats to the integrity of the Wadden Sea World Heritage Site and therefore need continuous attention. At the same time, if

practices in the key topics evolve towards more sustainability, these topics will support the area's conservation.

- The activities agreed upon for the prioritised five key topics aim to be performed by the TWSC bodies in close collaboration with the relevant groups. In the proposed implementation of the activities, the existing nature conservation standards and policies are to be maintained or improved to sustain the area's OUV for future generations. The implementation of the activities shall in no way lead to the lowering the existing standards.
- In the key topic fisheries, the objective is to advance towards the implementation of the Framework for Sustainable Fisheries (Annex 3, Tønder Declaration 2014) considering that the existing nature conservation standard should be improved or maintained. The activities aim to be performed by the TWSC bodies in collaboration with the relevant groups to i.a. stimulate exchange of knowledge, best practices and management experiences while keeping an overview and feeding the Wadden Sea World Heritage with the relevant information of other existing groups treating fisheries and aquaculture at the local, national, and regional levels. Awareness of the Wadden Sea World Heritage values and vulnerability and best practices and fish research should continue to be improved.
- In the key topic tourism, the objective is to increase the support of visitors, local entrepreneurs, destination marketing organisations

and other stakeholders for nature conservation by continuing to advance the implementation of the Sustainable Tourism Strategy (Annex 1, Tønder Declaration 2014) and Action Plan. The activities aim to be performed by the TWSC bodies in collaboration with the relevant groups to continue to improve awareness, enhance the nature conservation aspect in sustainable tourism by adding the expertise of site managers, and to strengthen initiatives for cross-border cooperation for fostering nature conservation by i.a. addressing gaps of knowledge regarding the impacts of tourism on the OUV.

- In the key topic shipping and ports, the objective is to further improve shipping safety, build on the current high status of prevention of accidents, preparedness and emergency response and foster nature friendly operations. The activities aim to be performed by the TWSC bodies in collaboration with the relevant groups to discuss the further implementation of the Operational Plans for the Wadden Sea PSSA (Annex 5, Tønder Declaration 2014), continue to raise awareness and to stimulate trilateral exchange and dialogue to i.a identify priorities to address with the related sectors and explore ways to implement and/or make use of best practices, existing technology, and international standards.
- In the key topic renewable energy and energy from oil and gas, the objective is to intensify the application of common best practices to protect the Wadden Sea, to support a nature friendly energy transition, and to foster a level playing field at highest applied

environmental standards for all three countries in a collaborative approach with the energy sector. The activities aim to be performed by the TWSC bodies in collaboration with the relevant groups to i.a. facilitate trilateral exchange and enhance and maintain dialogue and collaboration with agencies, energy companies and authorities and to formulate relevant research questions to investigate (potential) effects of new types of energy production, storage, and transmission.

- In the key topic coastal flood defence and protection, the objective is to enhance the use of nature friendly measures and maintenance practices in a collaborative approach with the competent authorities, implementing the Climate Change Adaptation Strategy (Annex 4, Tønder Declaration 2014). The activities aim to be performed by the TWSC bodies in collaboration with the relevant groups to i.a. enhance collaboration to introduce, where adequate and feasible in no-regret measures and nature-based solutions, stimulate trilateral exchange of best practices, formulate relevant research questions, and continue to improve awareness.
- Trilateral exchange of knowledge and best practices for the benefit of nature conservation management and raising awareness/advocacy are relevant for all five key topics. Trilateral knowledge exchange and advocacy activities need to be continuously improved to strengthen the Cooperation's joint arguments for nature conservation and to be able to adapt to thematic as well as technological and societal changes.

- Science and Research, Monitoring and Assessment, Knowledge Management, Education, Communication, and Collaboration and Partnerships are fundamental complementary activities to support management in the Wadden Sea. The SIMP comprises trilateral strategies, plans and initiatives, challenges, and outlook in these fields.
- The global dimension of the Wadden Sea is not only apparent in its status as World Heritage property, but also in the fact that it is highly interconnected with other sites. Collaboration in programmes like the Wadden Sea Flyway Initiative, international cooperation with other World Heritage properties, and the UNESCO World Heritage Centre thematic programmes allow for mutual learning and developing solutions to enhance protection.
- The Wadden Sea World Heritage Site, as one of the largest protected areas in Europe, contributes to the EU Biodiversity Strategy for 2030, especially to the nature protection targets of protecting at least 30% of the EU's land and sea, with at least one third thereof for strict protection, and aids to build a coherent Trans-European Nature Network.
- The TWSC actively contributes to the implementation of the Agenda 2030 for Sustainable Development, with its globally accepted Sustainable Development Goals (SDGs).

# 1. Introduction

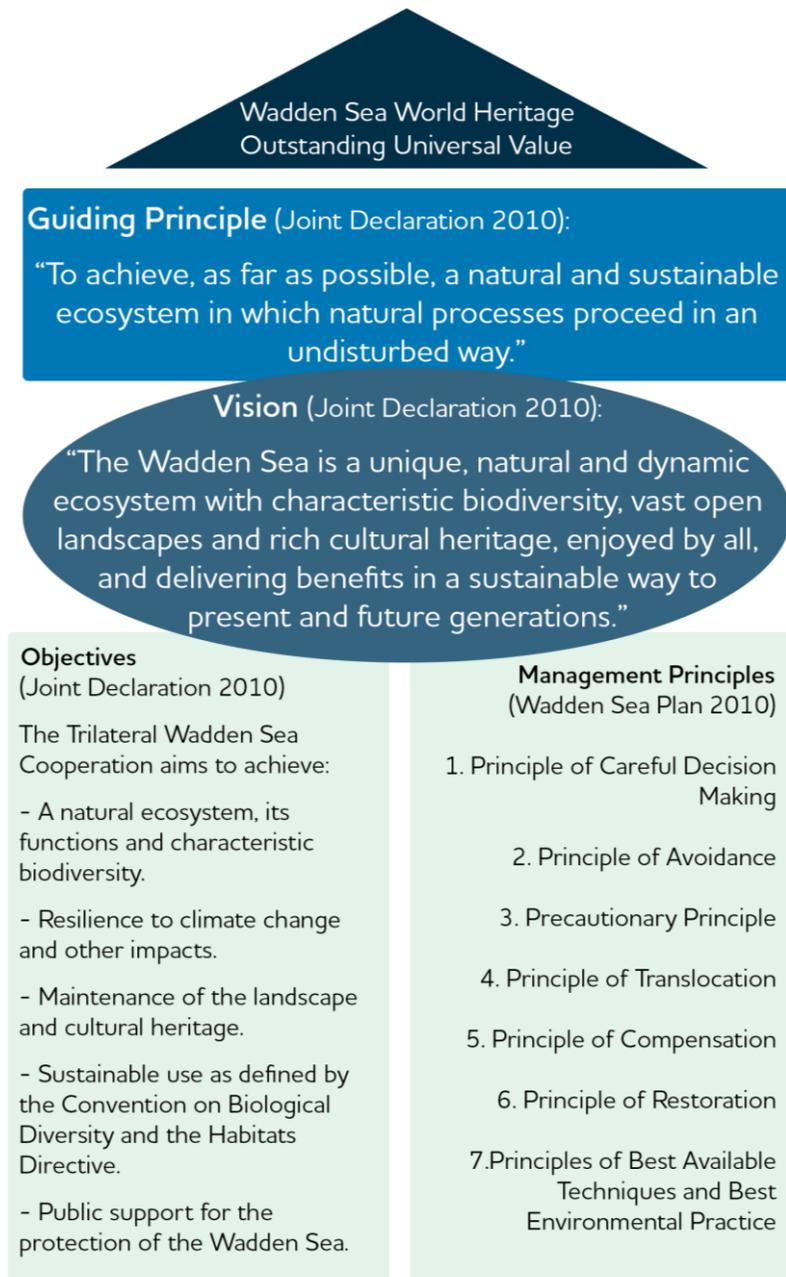

## 1.1. Background

The Wadden Sea was inscribed on UNESCO's World Heritage List in 2009 (and extended in 2014) in recognition of its Outstanding Universal Value (OUV). The global importance declared in the Statement of OUV<sup>1</sup> recognises that the Wadden Sea is the largest unbroken intertidal back-barrier sand and mudflat ecosystem in the world. Natural processes continue to thrive largely undisturbed, creating a variety of barrier islands, channels, flats, gullies, saltmarshes, and other coastal and sedimentary features. The Wadden Sea is rich in species specially adapted to these environmental conditions. These conditions also make the Wadden Sea a vital spot for migratory birds in the East Atlantic Flyway, which plays a critical role in the conservation of African-Eurasian migratory waterbirds.

To ensure the protection of this unique ecosystem for the benefit of present and future generations of humankind, Denmark, Germany, and the Netherlands are committed to working together to build a comprehensive national and international nature conservation system. In this framework, the Trilateral Governmental Cooperation on the Protection of the Wadden Sea, in short Trilateral Wadden Sea Cooperation (TWSC) was established in 1978 as a tool for cooperation and coordination of nature conservation. This

commitment, the Objective of the Cooperation, its Guiding principle, Vision, the areas of cooperation as well as institutional and financial agreements are specified in the Joint Declaration on the Protection of the Wadden Sea: Working together to meet present and future challenges (1982, revised in 2010). The listing of the Wadden Sea as a World Heritage property, the utmost international acknowledgment for a natural area, shows great appreciation and is the recognition of the longstanding trilateral cooperation, the support from the region and its stakeholders, and the conservation efforts.

The overriding and overarching objectives of the TWSC are framed by the Vision for the Wadden Sea and the Guiding Principle and are in line with the Outstanding Universal Value of the Wadden Sea World Heritage (Figure 1). Denmark, Germany, and the Netherlands have built independently, and jointly during their over 40 years of trilateral cooperation, a comprehensive management system addressing some of the most urgent and important key aspects. In addition to the Wadden Sea Plan (WSP, 2010) which is the commonly agreed policy and management plan, there are various trilateral, regional, and local strategies, management plans, plans of actions and networks. In short, plenty has already been achieved and the work towards important milestones is under way, but there are still challenges to be faced.

The development of the single integrated management plan (SIMP) responds to the request from the World Heritage Committee in 2014 to “the State Parties of Denmark, Germany and the Netherlands to develop a single integrated management plan for the entire transboundary property in conformity with the requirements of Paragraph 111 of the Operational Guidelines for the implementation of the World Heritage Convention, and to consider the options to strengthen the effectiveness of implementation of coordinated management within the property”.

## 1.2. The Purpose of the SIMP

Considering the wealth and diversity of management systems and instruments that are in place in the Wadden Sea World Heritage Site, the purpose of the SIMP, as agreed by the TWSC and stated in Annex 1 of the Leeuwarden Declaration (2018), is to **further facilitate the continuous improvement of management coordination for the protection and maintenance of the Outstanding Universal Value** by:

1. providing a clear overarching description of the management system at the regional, national, and trilateral level,

**Figure 1.** Guiding Principle, Vision and Objectives of the Trilateral Wadden Sea Cooperation (Joint Declaration 2010) and Management Principles (Wadden Sea Plan 2010, p. 9) as basis for the SIMP.

2. addressing key topics presenting concrete present and potential impacts to the Outstanding Universal Value which have been prioritised as pending management tasks,
3. present existing joint management activities across the property and showcase gaps which need enhanced joint efforts to maintain the area's Outstanding Universal Value.

### 1.3. The Status of the SIMP

The SIMP for the Wadden Sea is a political agreement of the Trilateral Wadden Sea Cooperation (TWSC), meaning it is a legally non-binding document of common political interest.

Existing policy documents and legally binding instruments at the trilateral, regional, national, or local level are not altered or affected by the SIMP.

The SIMP does not change neither the content nor the function of existing national or trilateral plans, thus it is complementary to the Wadden Sea Plan (WSP) (further detail about WSP is presented as the foundation of Section 3. Nature Conservation Management). The SIMP acts as an umbrella for existing plans and policies and provides information on how these are implemented trilaterally for nature conservation management.

### 1.4. The Scope of the SIMP

The focus of the SIMP is the Wadden Sea World Heritage Site and the conservation of its Outstanding Universal Value (OUV, explained in Section 2). The SIMP presents (Figure 2) a clear overview of the nature conservation management structures in Denmark, Germany, and the Netherlands and at the trilateral level, describes how the work is done together. The existing management elements in the context of the management cycle (as defined in § 111 of the Operational Guidelines for the Implementation of the World Heritage Convention) are also presented.

In the process of developing the SIMP (Section 1.5, Figure 3), five aspects have been prioritised as key topics for joint management. By referring to them as “key topics” it is not meant that other topics (i.e. related to nature conservation) are less important. The SIMP key topics are related to human activities relying on ecosystem services and taking place inside of and adjacent to the World Heritage property.

The five key topics are: 1) Fisheries, 2) Tourism, 3) Shipping and Ports, 4) Renewable Energy and Energy from Oil and Gas and 5) Coastal Flood Defence and Protection. These key topics were identified in an iterative and participative process that included the selection criteria of urgency, direct effect on the OUV and need to address at the trilateral level submitted in the Leeuwarden Declaration (2018), the Wadden Sea's site managers'

recommendations in 2019, and a prioritisation by Task Group World Heritage.

Additionally, the Statement of OUV notes that these topics may pose key threats to the integrity of the Wadden Sea World Heritage Site and therefore need permanent attention. At the same time, if practices in the key topics evolve towards more sustainability this can support the area's conservation. Furthermore, these topics are challenging, since the work of the TWSC on these topics has to actively engage the competent authorities and integrate the range of competences of site managers in those key topics. Addressing these at a trilateral level leverages the existing opportunities.

#### **Box 1.**

##### **Criteria for the selection of the key topics to be addressed**

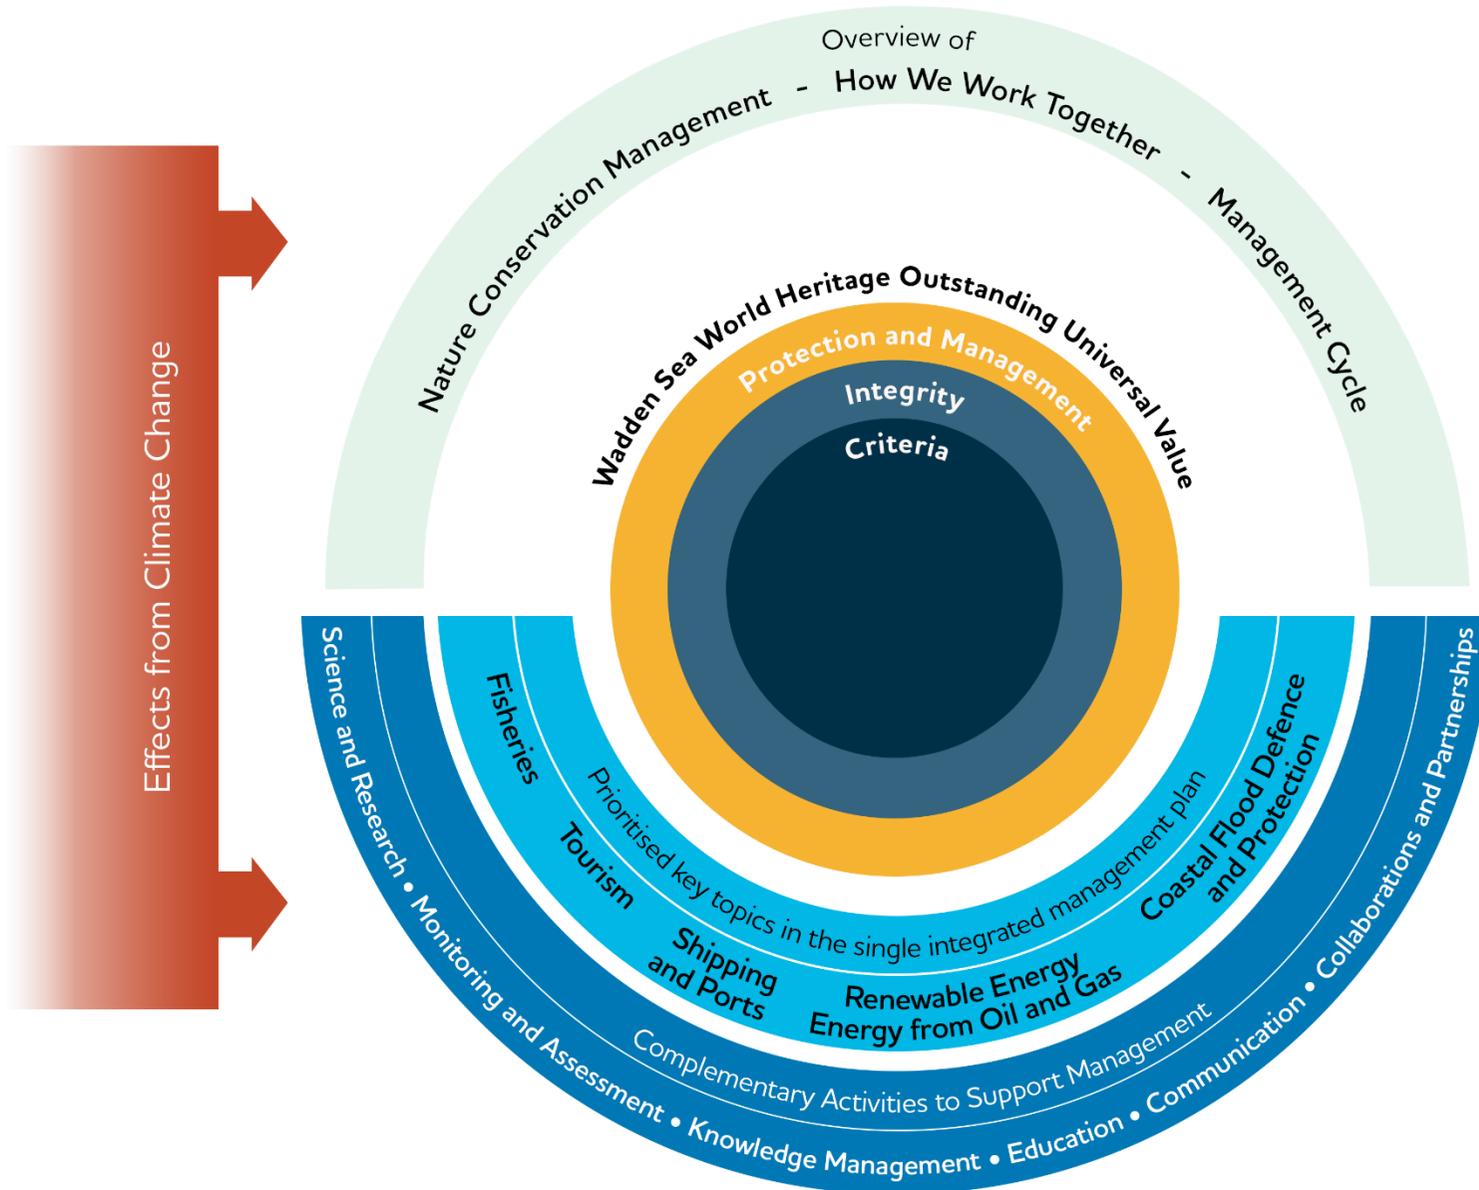

Annex 1 of the Leeuwarden Declaration (2018)

1. Main and prior management issues at trilateral level (identified in particular from the Wadden Sea Plan, recent Ministerial Declarations, and existing strategies and action plans);
2. Urgency to enhance management effectiveness trilaterally;
3. Management and protection requirements with regard to maintain and protect the OUV (as reflected in the Statement of OUV, relevant Committee Decisions and in the Periodic Reporting).

As Science and Research, Monitoring and Assessment, Knowledge Management, Education, Communication, and Collaboration and Partnerships are fundamental complementary activities to support management in the Wadden Sea, the SIMP compiles useful information for site managers in these fields. In the same way, the SIMP shows how the TWSC is addressing the overarching effects of climate change.

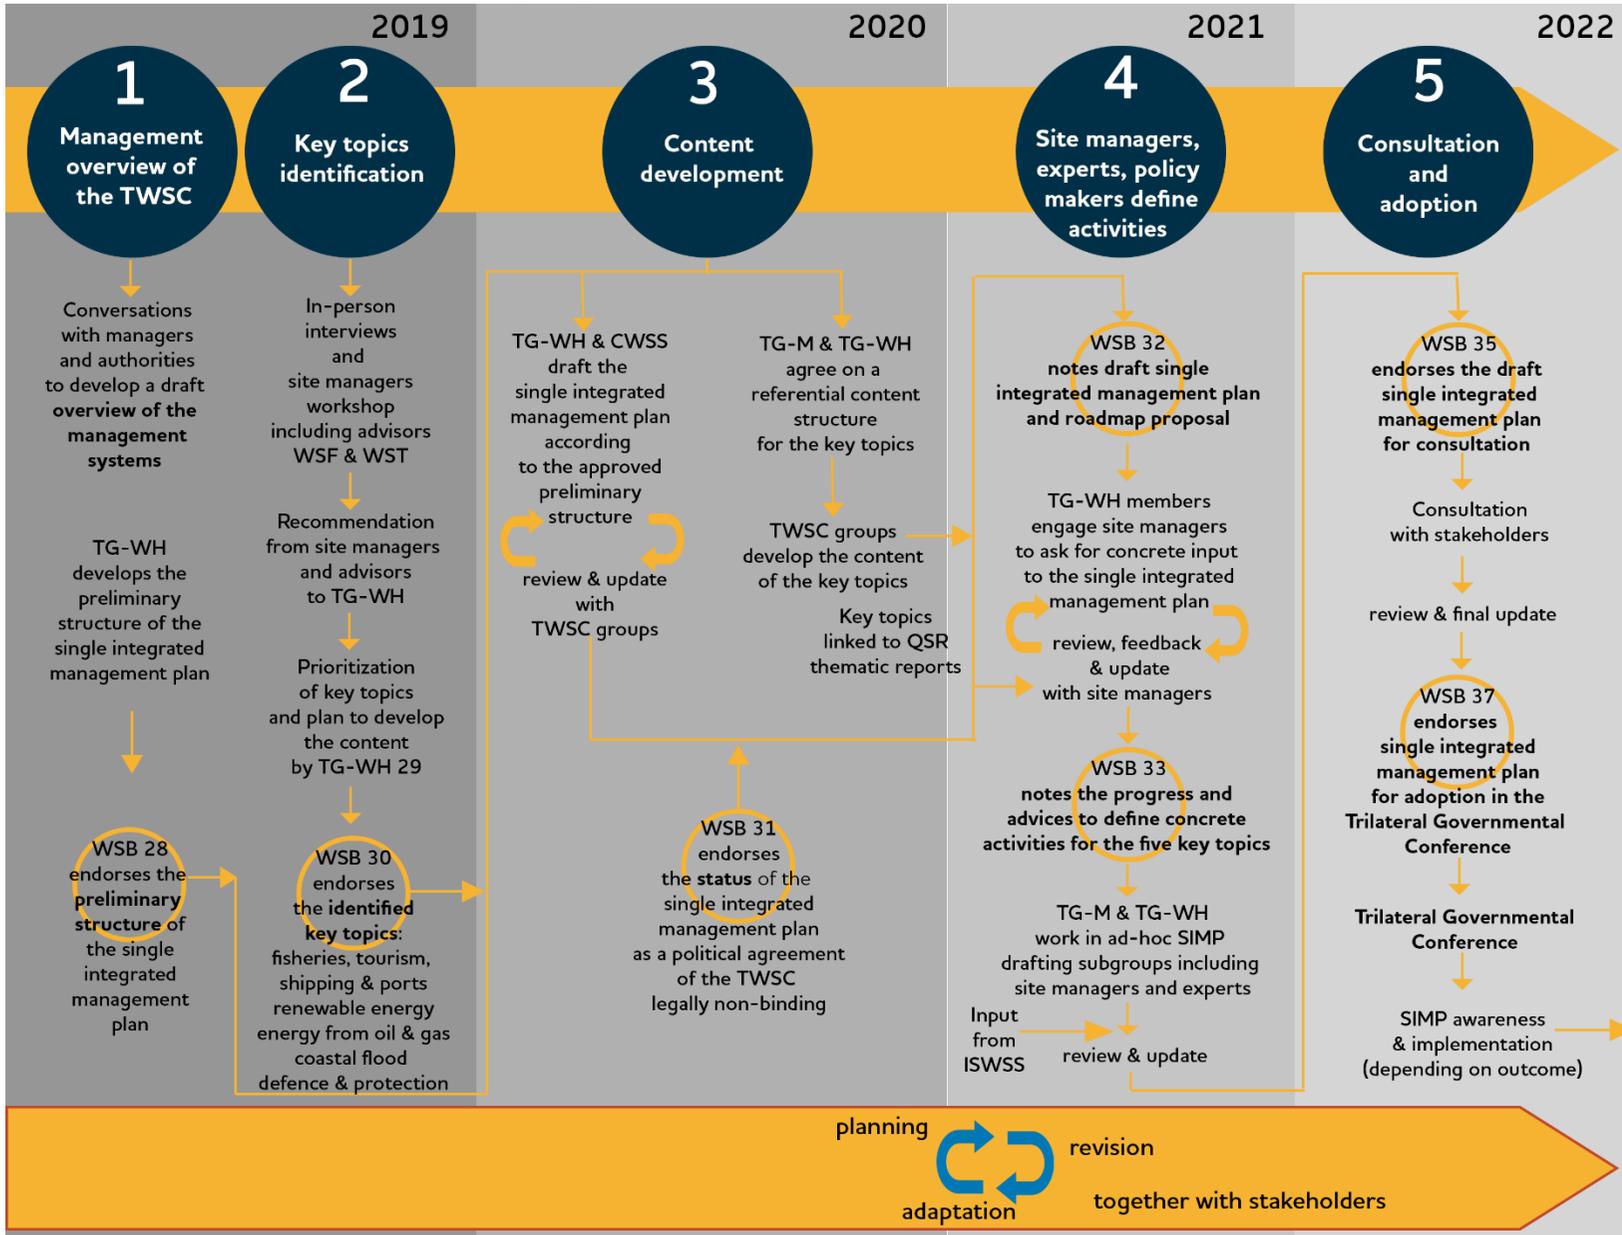

Additionally, the SIMP highlights the Wadden Sea World Heritage Site's global role and its link to global responsibilities. Cooperation with partners worldwide is instrumental in and supportive of the long-term protection of the Wadden Sea.

The main target audience of the SIMP are decision and policy makers and the site managers working in nature conservation of the Wadden Sea area in the three countries. The SIMP should inform decision and policy makers, and the site managers and improve the coordination of management among the site managers. Further important target audiences are environmental NGOs and other strategic partners, the scientific community, administrations, and colleagues from socio-economic sectors (e.g. fisheries, tourism and shipping) addressed in the SIMP, and the local population.

**Figure 2.** The scope of the SIMP has the Wadden Sea World Heritage Outstanding Universal Value at the core. The SIMP acts as an umbrella providing an overview of the management systems, tools, and collaboration. Five prioritised key topics are addressed considering how to improve information exchange and dissemination to better coordinate nature conservation management activities. To maintain the Wadden Sea World Heritage Outstanding Universal Value, the SIMP provides information about the complementary activities to support management. All considering the crosscutting effects of climate change.

### 1.5. The Process of Developing the SIMP

[Note In the future this figure will be simplified to show only the main steps relevant for site managers and other readers.]

**Figure 3.** The five phases of the development of the SIMP 2019-2022, and the detail of each phase.

  - TG-WH:** Task Group World Heritage
  - TWSC:** Trilateral Wadden Sea Cooperation.
  - WSB:** Wadden Sea Board

## 1.6. The Added Value

There are several important added values in the SIMP. By providing a clear and updated overview of the existing nature conservation structures, the SIMP aims to improve the understanding of the Wadden Sea World Heritage management system.

The SIMP compiles the status and management approaches to manage the key topics affecting the property addressed in a comprehensible and accessible way, which can be easily communicated and used on the operative level. The SIMP links each key topic directly to the OUV, describes the common ground expressed in the WSP and other trilateral tools and shows how each country implements measures.

The SIMP contributes to the definition of feasible and innovative means to further the exchange of management approaches, experiences, knowledge, and lessons learned at different levels of management and among site managers, partners of the Wadden Sea Area, decision makers, multipliers, and volunteers.

Such an exchange supports the joint development or the review of trilateral initiatives. Exchange further allows for connecting the existing and the future trilateral strategies and plans with regional and local strategies and plans, thus showing how the work is done together and highlighting the key aspects on which the cooperation could be further strengthened. In this way, local, regional, and

national actions are backed at the trilateral level and trilateral decisions are integrated into the local, regional, and national strategies and plans.

Finally, in the framework of the SIMP, the TWSC, including the site managers agree on aspects where trilateral cooperation can contribute towards their tasks of protecting the OUV (see Section 5). The SIMP acknowledges the existing differences in the legal responsibilities and competences of site managers in the three countries.

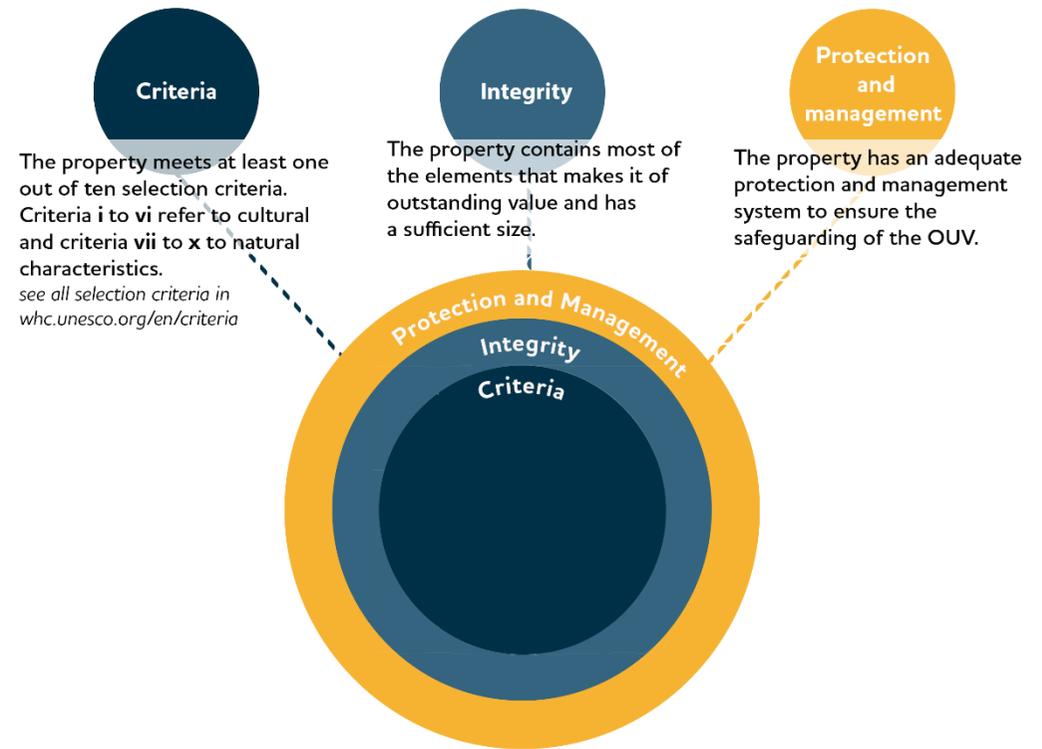

## 1.7. Review of the SIMP

The SIMP will be revised regularly by the Wadden Sea Board (WSB). Given the nature of the SIMP, a review cycle of 10-12 years is foreseen. This review presents the opportunity to adapt the SIMP to the management requirements of the TWSC, including the selection of key topics, with the support and participation of all parties involved in implementing the plan. Regular evaluation processes under trilateral and national obligations (i.e. Wadden Sea Quality Status Report, UNESCO Periodic Reporting, Natura 2000 Reports, etc.) will feed into the SIMP review. It is intended that the SIMP review will be aligned as much as possible with other process.

## 2. The Outstanding Universal Value of the Wadden Sea

The OUV describes why a property is among the most remarkable places on Earth. Its conservation is of importance for the present and future generations of all humanity.

The World Heritage Committee considers a property as having Outstanding Universal Value if the property meets at least one out of ten selection criteria and whether it meets the requirements of integrity, and protection and management (Figure 4). The World Heritage Committee adopts a Statement of the OUV when inscribing a property in the World Heritage List which describes how the criteria and the requirements of integrity, and protection and management are met. The Statement of OUV for the Wadden Sea World Heritage can be found in the UNESCO website<sup>2</sup>.

**Figure 4.** The Outstanding Universal Value (OUV) consists of three conditions: selection criteria, integrity, and protection and management.

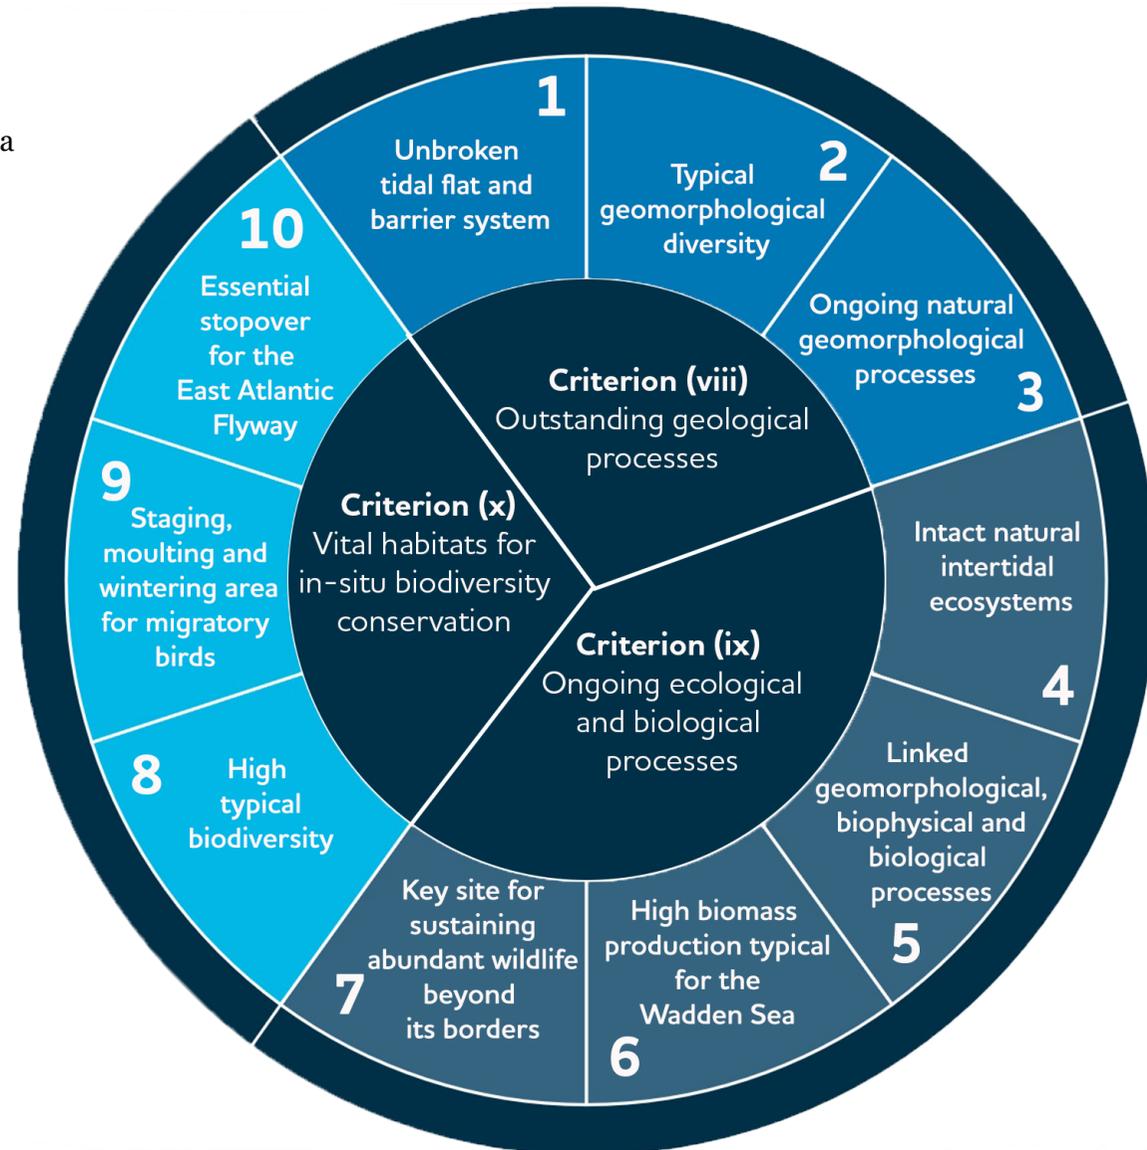

## 2.1. The OUV: Criteria and Key Values

The Wadden Sea World Heritage Site meets three out of four criteria for natural sites:

- ✓ (viii) Outstanding geological processes
- ✓ (ix) Ongoing ecological and biological processes
- ✓ (x) Vital habitats for *in-situ* biodiversity conservation

The fourth Criterion (vii) Exceptional natural phenomena and beauty has not been applied for.

Criteria viii, ix and x described in the Statement of OUV of the Wadden Sea World Heritage, are expressed through 10 key values (Figure 5) that show the elements that make the Wadden Sea of universal importance.

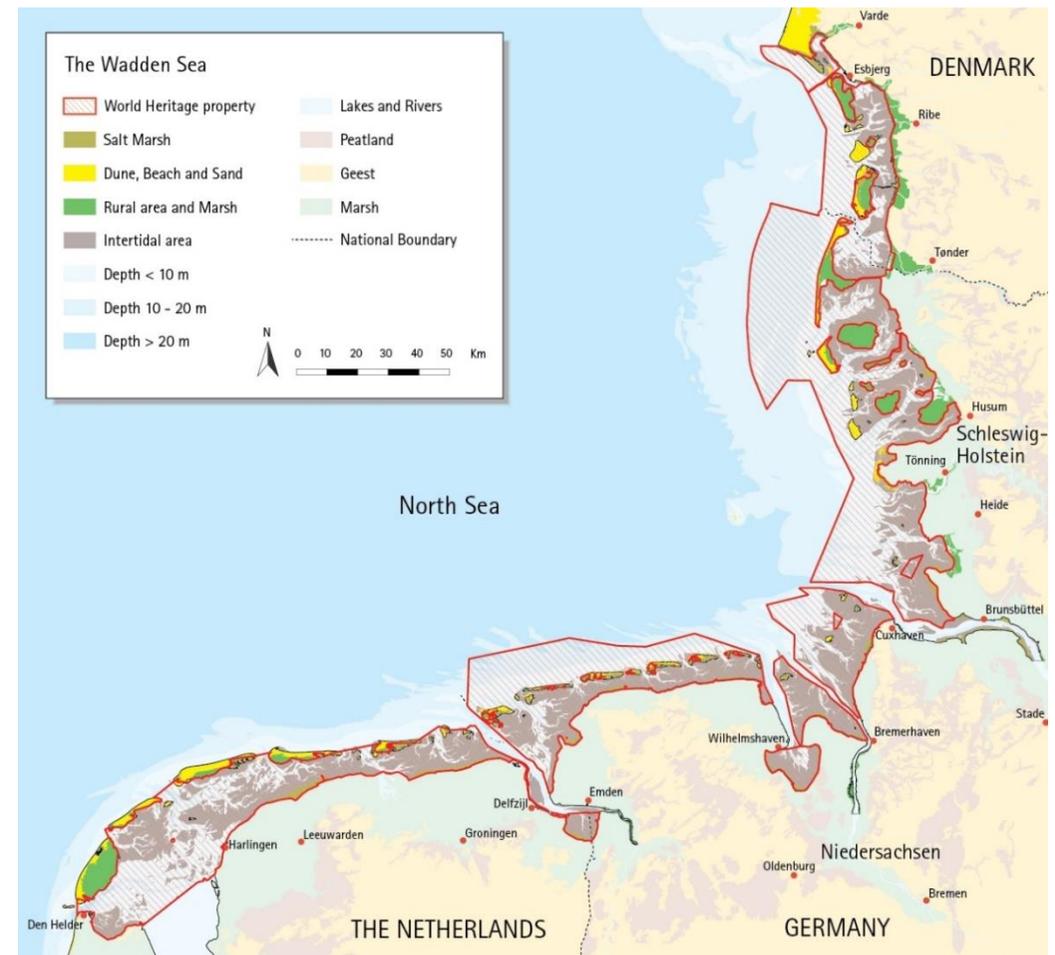

**Figure 5.** The WSWH criteria and the respective 10 key values derived from the Criteria described in the Statement of OUV of the Wadden Sea [whc.unesco.org/en/decisions/1946/](http://whc.unesco.org/en/decisions/1946/).

## 2.2. The OUV: Integrity

Integrity is a measure of the wholeness and intactness of the natural heritage and its attributes (§ 88, Operational Guidelines for the Implementation of the World Heritage Convention). The integrity is given by the elements included in the property that reflect its OUV, as well as to the appropriateness of the property's size to maintain the features and processes, and its ability to cope with exposure to adverse effects, including those from outside the property.

In that respect, the Wadden Sea World Heritage Site, from Denmark through Germany to the Netherlands, includes all the Wadden Sea ecosystem components and features (species, habitats, processes) that constitute a natural and dynamic Wadden Sea. The area is large enough to ensure that these exceptional aspects are included and maintained (see the Statement of OUV 2014).

The Wadden Sea World Heritage Site is subject to a comprehensive protection, management, and monitoring system. The Statement of OUV (2014) recognises that the key threats require ongoing attention to maintain the integrity of the property. Key threats include fisheries activities, developing and maintaining harbours, industrial facilities surrounding the property including oil and gas rigs and wind farms, maritime traffic, residential and tourism development and impacts from climate change.

**Figure 6.** The Wadden Sea World Heritage Site encompasses all the natural habitats, species and processes that constitute the Wadden Sea ecosystem.

### **2.3. The OUV: Protection and Management Requirements**

The TWSC provides the overall framework and structure for integrated conservation and management of the Wadden Sea World Heritage Site as a whole, and coordination between all three States including national, regional, and local levels. In fact, the Wadden Sea's highly effective conservation status is the result of four decades of joint nature protection efforts of Denmark, Germany, and the Netherlands, where the Wadden Sea has been designated as national parks, nature reserves and Natura 2000 sites. Each State Party has comprehensive legal protection measures in place. Working together in the TWSC, these countries ensure the coordinated management of the area (see the Statement of OUV 2014).

### 3. Nature Conservation Management

At the beginning of the Trilateral Wadden Sea Cooperation in the late 70's, nature conservation management of the Wadden Sea was mainly a national matter. But for the past 30 years, the European Union (EU) has made increasing effort to protect the European natural heritage. The present-day management system of the Wadden Sea World Heritage Site is almost entirely covered by European Union law and international conventions in addition to the national regulations. The five most important European Union directives are described in Table 2.

In 1979 the EU Birds Directive (2009/147/EC) was adopted, which was the first EU regulation aimed at protecting the environment. Since then, nature protection has been a cornerstone in the EU. But practical planning- and implementation steps need to be taken at national, regional, and local levels by the competent authorities. The environmental laws comply with the principle of subsidiarity, leaving it as far as possible to the responsible authorities to set up their priorities and manage their programs. Differences in political and administrative structures in the three Wadden Sea countries regarding the implementation of EU law into

national legislation, present challenges in complying with the expressed political intentions of managing the Wadden Sea as a common entity. At the same time, these differences between the countries can also be utilised for strengthening nature management by aiming for the best possible effect of policy and measures for nature.

In Denmark, since 1939, when the first game reserve was established in parts of the Danish Wadden Sea the area has been subject to an increasing degree of protection until 1998 when the present level of protection was reached with the inclusion of provisions based on Natura 2000 (EU Birds- and EU Habitats Directives 92/43/EEC). Thus, the national implementation processes of EU legislation into national law and subsequently into binding management plans for the public authorities, consider as well trilateral strategies and plans (listed in Figure 7), such as Declarations and most recently the SIMP, which can be characterized as a meta-strategy. In 1985 a major update of the Statutory Order on conservation of the Danish Wadden Sea was derived from the Copenhagen Declaration of 1982. The latest example is the inclusion of the SIMP in the EU Marine Strategy Framework Directive (2008/56/EC) action plan, along with more specific fields of action (fish, alien species, marine mammals, and birds) building upon some of the TWSC strategies approved by the three countries.

In Germany, due to the federal system, the (political, administrative, and legal) structures differ from those in Denmark and the Netherlands. In Germany, nature conservation laws on federal as well as on federal state level have long been in place. There are specific acts for the Wadden Sea National Parks of the federal states. EU directives are usually implemented by integration into existing national laws and legal ordinances, so existing laws had to be supplemented with the EU regulations. The entire German Wadden Sea is designated as protected area under the EU Habitats and/or Birds Directive (92/43/EEC, 2009/147/EC) and lies within the scope of the EU Marine Strategy Framework Directive (2008/56/EC). The inner Wadden Sea is also subject to the scope of the EU Water Framework Directive (2000/60/EC).

In the Netherlands, the EU Birds Directive (2009/147/EC) and EU Habitats Directives (92/43/EEC) were transposed through the Nature Conservation Law 1998. The Nature conservation Law 1998 has been replaced by the Law on Nature Conservation (2015) which continues to implement both the EU Birds and EU Habitats Directives, as well as the Water Framework Directive (2000/60/EC). The entire Dutch Wadden Sea is designated as protected area under the Habitats and Bird Directives and the Water Framework Directive.

**Table 2.** Overview of the most significant European Union legislation and the national laws in which these are transposed and plans. Abbreviations are SH: Schleswig-Holstein, HH: Hamburg, LS: Lower Saxony, SAC: Special Areas of Conservation, SPA: Special Protection Areas.

EU-directive	Adoption	Status in The Netherlands	Status in Germany	Status in Denmark
<b>Natura 2000 Directives (Birds Directive 2009/147/EC and Habitats Directive 92/43/EEC)</b>	Birds: 1979 Habitats: 1992	Transposed in the Law on Nature Conservation.  Natura 2000 plans are reviewed and updated periodically.	Transposed in: Federal Nature Conservation Act (Bundesnaturschutzgesetz BNatSchG).  State Nature Conservation (Implementation) Acts (SH, HH, LS) (Landesnaturschutzgesetz/ Ausführungsgesetz zum BNatSchG).  National Park Acts (SH, HH, LS).  Specific conservation objectives for each N2000 site (SAC and SPA) are covered by the National Park Acts in LS and HH; SH has a separate document published by the Ministry for the Environment of SH. Wadden Sea Plan (WSP 2010) functions as the Habitats & Birds Directive management framework for the German part of the Wadden Sea, in LS concretised by the Management Planning for the SAC Wadden Sea.	Transposed in the Marine Protection Act, the Environment Protection Act, and the Nature Conservation Act.
<b>Water Framework Directive 2000/60/EC</b>	2000	Transposed in the Law on Nature Conservation, the Water Law, the National Water Policy Plan, the Regional Water Policy plans of the provinces.	Transposed in: Federal Water Resources Act (Wasserhaushaltsgesetz), State Water Law (Landeswassergesetz), Management plans for the river basins.	Transposed in the Environment Protection Act.
<b>Marine Strategy Framework Directive 2008/56/EC</b>	2008	The Marine Strategy Framework Directive is not implemented in the Dutch Wadden Sea.	Transposed in: Federal Water Resources Act (Wasserhaushaltsgesetz), State Water Law (Landeswassergesetz), the management plan is the programme of measures 2016 (currently working on an update)	Transposed in the Danish Marine Strategy II and the Danish Marine Strategy Act.
<b>Marine Spatial Planning Directive 2014/89/EU</b>	2014	Transposed in the National Water Policy plan.	Transposed in: Spatial Planning Act (Raumordnungsgesetz, ROG), Lower Saxony Regional Planning Act (Niedersächsisches Raumordnungsgesetz, NROG), Schleswig-Holstein State Planning Act (Landesplanungsgesetz – LaplaG)	Transposed in the Marine Spatial Planning Act (Bekendtgørelse af lov om maritim fysisk planlægning – 2020).

In summary, the management system of the Wadden Sea World Heritage Site is a combination of the existing national protection and management systems (Annex Figures A3-5) and the trilaterally coordinated management including a number of trilateral plans, strategies and action plans (see Figure 7).

The Wadden Sea Plan (WSP) 2010 constitutes the common framework for the protection and sustainable management of the Wadden Sea as an ecological entity and is the accepted coordinated management plan for the Wadden Sea World Heritage property, as stated in the Nomination dossier presented to the World Heritage Committee (2013). The WSP presents the trilaterally agreed targets, policies, and measures for the Wadden Sea Cooperation Area as an ecological entity, as well as its landscape and cultural heritage, within the cultural entities. The targets agreed upon for landscape and culture, water and sediment, salt marshes, the tidal area, beaches and dunes, estuaries, the offshore area, the rural area, birds, marine mammals, and fish are the base for the trilaterally and regionally existing topic specific visions, strategies, and plans. In Germany, the WSP serves as the Natura 2000 and national parks' management plan, that is where deemed necessary, supplemented by further detailed management tools (such as for certain habitat types, sectoral plans, or management concepts).

The following sections (3.1 and 3.2) provide an overview of the management system at the trilateral and the national levels. These serve to communicate and disseminate the trilateral management framework in an easy and clear way to national site managers as well as to all stakeholders and the general public.

### **3.1 Trilateral Cooperation Structure**

The Trilateral Wadden Sea Cooperation (TWSC) comprises two levels of decision making (Governance Arrangements, 2010):

**I.** The Trilateral Wadden Sea Governmental Council, composed of the responsible ministers of the participating governments to oversee the Cooperation, provides political leadership and strategic guidance, assures international policy development, harmonisation, and decision-making between the three governments. Every period of three to four years, the three countries alternate the presidency of the Cooperation. Presidencies are handed over during the Trilateral Governmental Conferences (TGC).

**II.** The Wadden Sea Board (WSB) is the governing body composed of delegations appointed by each participating Government. Each delegation includes a representative from the lead Ministry for the Cooperation, and three further members from decentralised governments, other related

Ministries, or experts. The WSB oversees the operational and advisory bodies and secures relations with key stakeholders.

The WSB receives further support from Advisors outside the governmental Cooperation, but with expertise and experience relevant to the Cooperation. Appointed advisors are the Wadden Sea Forum, representing stakeholders from the different sectors of society including municipalities and counties, and the Trilateral Wadden Sea Team of environmental NGO's.

The Common Wadden Sea Secretariat (CWSS) is responsible for supporting the WSB and the Council and for implementing the CWSS's workplan.

The operational bodies of the TWSC are four types of groups with specific functions and composition:

1. Task Groups (TG) are appointed by the WSB to prepare expert topics for the Board and to undertake specific tasks, plans or projects in line with the Ministerial Declarations. TGs are usually time limited.
2. Expert Groups (EG) are generally long-term or permanent technical groups. They have operational and advising tasks.
3. Network Groups (NG) are similar to Expert Groups but with more of a networking platform character, stakeholder involvement is explicitly necessary and appreciated.

4. (ad hoc) Working Groups (WG) are temporarily installed by TGs or the WSB for elaborating on certain aspects of issues targeted in the corresponding TG.

All trilateral groups are requested to generally foster exchange with other groups during the various processes (TWSC review process, 2019). The structure of the TWSC is reproduced in Figure A.1 in Annex 1. Members, supporting organisations and advisors of the WSB are presented in Figure A.2 in Annex 1.

### **3.2 National Administration and Management Systems**

#### Denmark

The Ministry of Environment and the Danish Environmental Protection Agency are responsible for writing national legislation and national management plans which are enforced by themselves and/or by other agencies and municipalities. Among their responsibilities are the implementation of Natura 2000, Marine Strategy Framework- and Water Framework Directives, and more specifically the Nature Protection Act and its Statutory Order on the Wadden Sea Nature and Wildlife Reserve. Marine physical planning, also concerning the Wadden Sea, is under the responsibility of the Danish Maritime Authority.

The Danish Nature Agency (as the Environmental Protection Agency) is a unit under the Ministry of Environment and is responsible for the Nature and Wildlife Reserve management administration in the Wadden Sea area through a statutory order issued under the Nature Protection Law. The Nature Agency is also a considerable landowner in the area.

The Varde, Fanø, Tønder and Esbjerg Municipalities, within or adjacent to the Wadden Sea, are responsible for the enforcement of the Nature Protection Act and the implementation and enforcement of Natura 2000. In an advisory function to the government agencies in the Wadden Sea area, an Advisory Board is established, governed by the four municipalities and with representatives of a wide range of stakeholders of the Wadden Sea (Annex 1, Figure A.3).

The Danish National Parks have been established within a framework of a common law as a state-owned foundation, and for each national park, a statutory order has been issued according to the law. Following this, a National Park Board is appointed by the Minister and is responsible for implementing a strategic plan for the National Park. The National Park secretariat has no management or authoritative tasks as such but do play a role in the governing concept of the World Heritage in the group of site managers especially in communication, interpretation, and educational activities. Further, the National Park has an Advisory Board consisting of local community members.

## Germany

The overall legal framework for nature conservation is the Federal Nature Conservation Act. Due to the federal system in Germany, the implementation of the Act lies in the responsibility of the federal states Hamburg, Lower Saxony, and Schleswig-Holstein. The Federal Nature Conservation Act includes provisions for the establishment of Nature Reserves and National Parks but also for procedural matters concerning impact assessments, esp. regarding Art. 6 of the Habitats Directive (Nomination Dossier, 2008). The Federal Nature Conservation Act is supplemented by federal state level legislation that may vary in detail. Hence, the Federal Nature Conservation Act and the nature conservation acts of the federal states together, form the legal basis for nature conservation and management. Especially the National Park Acts of Hamburg, Lower Saxony, and Schleswig-Holstein, establishing the respective Wadden Sea National Parks within each of the three federal states, provide the legal basis for safeguarding protection and management of the Wadden Sea World Heritage. At the federal state level, the highest nature conservation authorities are the Ministries of Environment. The National Park Authority in each federal state is the competent nature conservation authority for the Wadden Sea area and is responsible for management and for the enforcement of their respective National Park Acts (Annex 1, Figure A.4).

National Park Advisory Boards are important in terms of consultation, advice, and the involvement of local stakeholders. In Schleswig-Holstein and Lower Saxony, the respective advisory boards are composed of representatives from the regional and local governments and regional stakeholders concerned with commercial, recreational, and environmental interests and of scientific institutions. The boards are consulted and provide advice to the National Park Authorities and give their consent on principal matters and long-term planning.

### The Netherlands

In 2020, the Dutch Government installed a new governmental organisational structure for the Dutch Wadden Sea comprising three groups (Annex 1, Figure A.5). The first is the Wadden Sea Management Authority chaired by the Ministry of Agriculture, Nature and Food Quality, the second is the Policy Board of the Wadden Sea Region chaired by the Ministry of Infrastructure and Water Management, and the third is the Stakeholder Council of the Wadden Sea Region chaired by the King's Commissioner of the Province of Fryslân. The chair of the Stakeholder Council is also the vice-chair of the Policy Board, ensuring the proper connection between stakeholders and the policy level.

### 3.3 Site managers

In the context of the SIMP, site managers are professionals with direct responsibilities for nature conservation and management of the Wadden Sea World Heritage Site. Table 3 presents the composition of nature conservation site managers in the three countries.

**Table 3.** composition of site managers in the three Wadden Sea countries.

Country	Composition of site managers in the Wadden Sea
<b>The Netherlands</b>	<p>Rijkswaterstaat, Natuurmonumenten, Staatsbosbeheer, Ministry of Agriculture, Nature and Food Quality, the three provinces (Groningen, Friesland, and Nord Holland), Landschap Noord-Holland, Groninger Landschap, It Fryske Gea and private owners (each with their own management plans for the areas that they support in the Wadden Sea).</p> <p>The Wadden Sea Management Authority is working on integral site management of the Wadden Sea.</p> <p>The main tasks of the site managers concern: physical site management, nature recovery, permitting procedures, monitoring, surveillance and enforcement, hospitality, practical research.</p>
<b>Germany</b>	
<b>Hamburg</b>	<p>National Park Authority* Free and Hanseatic City of Hamburg, Ministry of Environment, Climate, Energy and Agriculture Department of Nature Conservation (BUKEA), Wardening NGO contracted by the National Park Authority</p> <p>The Hamburg National Park Authority as site manager is responsible for the protection of nature, environmental observation, and research, as well as environmental education and promoting the experience of nature in the National Park.</p> <p><i>* part of the Hamburg Ministry of Environment</i></p>
<b>Schleswig-Holstein</b>	<p>National Park Authority* Ministry for Energy, Agriculture, the Environment, Nature and Digitalisation (MELUND)</p>

	<p>Wardening NGOs contracted by the National Park Authority</p> <p>The Schleswig-Holstein National Park Authority as site manager is responsible for monitoring, coordination of scientific studies and applied research, management activities, species protection, exceptions and exemptions from the National Park Act, fines. It acts as stakeholder in planning and permission procedures, surveillance and wardening, communication, information and education, coordination of the UNESCO Biosphere Reserve and networks.</p> <p><i>* part of the State Agency for Coastal Defense, National Park and Marine Conservation Schleswig-Holstein as a subordinate authority of the MELUND.</i></p>
<b>Lower Saxony</b>	<p>National Park Authority* (NLPV) Ministry for Environment, Energy, Building and Climate Protection of Lower Saxony Wardening NGOs contracted by the National Park Authority</p> <p>The Lower Saxon National Park Authority as site manager is responsible for monitoring, scientific studies, and research coordination; surveillance and wardening; communication, information and education; maintenance, development and restoration; species protection; exceptions and exemptions; fines; acts as stakeholder in planning and permission procedures; coordinates the UNESCO Biosphere Reserve.</p> <p><i>* competent authority, subordinate to the Ministry for Environment, Energy, Building and Climate Protection of Lower Saxony.</i></p>
<b>Denmark</b>	<p>Municipalities of Esbjerg, Fanø, Varde, Tønder Danish National Park Wadden Sea Nature Agency* Environmental Protection Agency* Coastal Authority* The Agency for Culture and Palaces</p> <p>The main tasks of the Agencies and Authority part of the Ministry of Environment concern: nature protection, monitoring and recovery, implementation of the Natura 2000. The Municipalities contribute with implementation of the Natura 2000, are responsible for the environmental impact reports and initiatives for restoration. The National Park runs projects for</p>

	<p>nature conservation, communication, education, and awareness, and is responsible for sustainable tourism initiatives. The Agency for Culture and Palaces, part of the Ministry of Culture Denmark, represents the State Party to the World Heritage Convention.</p> <p><i>*part of Ministry of Environment of Denmark.</i></p>
--	---

### 3.4 Management Cycle

The Operational Guidelines for the Implementation of the World Heritage Convention (§ 111) state that a management cycle of planning, implementation, monitoring, evaluation, and feedback is among the elements of an effective management (Figure 7). The existing TWSC management instruments are organised in the phases of the management cycle.

#### Planning

The Guiding Principle of the TWSC (see Figure 1) since 1991, is the guideline for management planning at all levels (Esbjerg Declaration 1991). An essential element of the management system and the backbone of the planning phase in the management cycle is the WSP. The WSP was adopted at the 8<sup>th</sup> Trilateral Governmental Conference in Stade in 1997 and updated in 2010 (Sylt Declaration 2010) to take the inscription of the Dutch-German Wadden Sea as World Heritage and new developments of European Union (EU) Directives into account.

The Ministerial Declarations issued on the occasions of the TGC every four years, are political declarations, in which agreements are made between the governments, which are relevant for all areas of the cooperation such as management, monitoring, international cooperation, etc. The declarations are therefore an integral part of the total protection and management scheme of the property to which the governments have committed themselves and are politically binding for the appropriate authorities in the three countries.

At the national level, management and monitoring activities are guided by the requirements of the national management systems and relevant EU law. Among these are: Natura 2000 management plans in Denmark and the Netherlands, National Park Management Plan in Denmark, and several management plans for the Wadden Sea area in the Netherlands. In Germany, the WSP serves as the management plan for Natura 2000 areas within the Wadden Sea and the Wadden Sea National Parks and is accompanied by sectoral and regional management plans and regulations.

### Selection of trilateral management plans, strategies, visions and action plans to support management planning and implementation

- Wadden Sea Plan (WSP) 2010
- Trilateral Monitoring and Assessment Programme (TMAP) 1997, TMAP handbook 2008, and TMAP Strategy 2014
  - Trilateral Climate Change Adaptation Strategy (CCAS) 2014
  - Wadden Sea World Heritage Strategy 2014-2020
  - Framework for Sustainable Fisheries 2014
  - Sustainable Tourism Strategy 2014 and Action Plan
  - Wadden Sea World Heritage Education Strategy 2018
  - Trilateral Communication Strategy (to update 2021)
  - Vision Wadden Sea Flyway Initiative (WSFI) 2014
  - Breeding Birds Action Plan 2016
  - Trilateral Wadden Sea Swimway Vision 2018 and Action Programme 2019
  - Trilateral Management and Action Plan for Alien Species (MAPAS) 2019
  - Seal Management Plan (SMP) 2018-2022
  - Operational Plans for the Particularly Sensitive Sea Area (PSSA) Wadden Sea 2014 designated by the IMO

**Figure 7.** Phases of the management cycle required for an effective management system (as defined in § 111 of the Operational Guidelines for the implementation of the World Heritage Convention) adapted to the Wadden Sea World Heritage by including the elements in each phase. List of trilateral plans, strategies, and action plans to support management. All TWSC management plans, visions, strategies, and action plans can be found in [www.waddensea-worldheritage.org](http://www.waddensea-worldheritage.org).

## Implementation

Trilateral visions, policies and agreements are implemented in the three countries according to their laws, management structures, political frameworks, and cultures. Specific action plans and joint projects assist the implementation on the ground by specifying who, where, when and how. Inversely, TWSC political decisions are fuelled by the local and national approaches and requirements (see an example in Box 2).

### Box 2. Wadden Sea Seals Agreement

As an example, due to the Wadden Sea's significance for migration of marine fauna, the three Wadden Sea countries signed the Agreement on the Conservation of Seals in the Wadden Sea (WSSA) in 1991. The WSSA represents the first regional agreement concluded under the United Nations Convention on the Conservation of Migratory Species of Wild Animals (CMS), and the CWSS acts as the secretariat. The aim of this trilateral environmental agreement is to cooperate closely in achieving and maintaining a favourable conservation status for the harbour seal population of the Wadden Sea. The WSSA contains provisions, amongst others, on research and monitoring, protection of habitats and awareness resulting in a stable harbour seal population which recovered well from the two *Phocine distemper virus* (PDV) epidemics in 1988 and 2002. The underlying framework is the Seal Management Plan (SMP) which is regularly reviewed and adjusted to reflect new developments.

Examples of successful joint projects that promoted the development and current implementation of the Sustainable Tourism Strategy are the Interreg projects PROWAD<sup>3</sup>, PROWAD LINK<sup>4</sup>, Wadden Agenda and Wadden Agenda 2.0<sup>5</sup>, and NAKUWA<sup>6</sup>. The Wadden Sea Flyway Initiative (WSFI) collaborates with partners beyond the trilateral cooperation to jointly protect and manage the important sites along the East Atlantic Flyway (see Section 6. Global Dimensions).

## Monitoring

The Trilateral Monitoring and Assessment Programme (TMAP) is one of the cornerstones of the TWSC and a prerequisite for the inscription on the World Heritage List. The aims of the trilateral Wadden Sea monitoring, assessment and research are:

- to provide a scientific assessment of the status of the ecosystem,
- to assess the status of the implementation of the Ecological Targets of the WSP,
- to use ecological monitoring and assessment to fulfil the UNESCO obligations for the World Heritage.

The assessment results are presented in periodic Quality Status Reports (QSR) authored by TWSC experts and independent scientists.

Further, the World Heritage Convention (Art. 29) requests the State Parties to participate in regular periodic reporting on the implementation of the World Heritage Convention. The report is submitted every six years to the World Heritage Centre (§ 199, Operational Guidelines for the Implementation of the World Heritage Convention).

Additionally, the three countries as EU member states, are obliged to monitor the conservation status for all habitats and species (§ 11 of the Habitats Directive) of community interest (as listed in Annex I, II, IV and V) and bird species under the Birds Directive as well as the status of marine waters under the Water Framework and the Marine Strategy Framework Directives.

### **Evaluation**

Since 1993 the TWSC between Denmark, Germany and the Netherlands has periodically produced QSRs describing and evaluating the current ecological status of the Wadden Sea. The QSRs identify changes in this status and their possible causes, classify issues of concern and indicate possible measures of improvement, including evaluation of the likely effectiveness of these measures. They also indicate knowledge gaps. Between 1993 and 2022, six QSRs have been produced. The QSRs are part of the TMAP. The latest QSR reports are published online<sup>7</sup>.

Additionally, the World Heritage Committee may request the state parties to report on the state of conservation of the property through the reactive monitoring procedure (§ 169-176, Operational Guidelines for the Implementation of the World Heritage Convention). In the reactive monitoring procedure, the State Parties shall submit specific reports and impact studies each time exceptional circumstances occur, or work is undertaken which may have an impact on the Outstanding Universal Value of the property or its state of conservation (§ 172-173). Replies to the World Heritage Centre requests regarding information from other sources than the State Parties (§ 174) are done jointly by the three Wadden Sea countries.

Cyclically, the World Heritage Centre develops regional reports with the periodic reports<sup>8</sup> submitted for each property. This is presented to the World Heritage Committee for examination, adoption, and formulation of recommendations.

As most of the Wadden Sea World Heritage area is also designated as EU Natura 2000 sites, each EU member state reports every six years about the progress made on the implementation of the Habitats Directive, specifically on the status and trends of the habitat types and species (§ 17, Habitats Directive Reporting), as well as the Birds Directive, Water Framework Directive, and the Marine Strategy Framework Directive.

## Feedback

Feedback as part of the management cycle takes place at all levels of the TWSC structure (Section 3.1. Trilateral cooperation structure and Figure A.1 in Annex 1).

Feedback from the task, expert, network and working groups of the TWSC flows between the groups and to the WSB. TWSC groups meet three to four times per year to exchange information, coordinate monitoring, assess results and provide advice on the scientific basis for management. The WSB meets at least two times per year.

The external advisors in the WSB for example, representing the Wadden Sea Forum of stakeholders and the Wadden Sea Team of environmental NGO's meet at least once a year to exchange and coordinate with their sector. They give advice and feedback to the WSB.

During the Wadden Sea Conferences, including the International Scientific Wadden Sea Symposium (ISWSS), the Youth Conference, the Wadden Sea Day and additional thematic workshops, the research community, site managers, environmental NGO's, stakeholders, and the younger generation, give their views and advice on management and political decisions addressing the Trilateral Governmental Council.

The QSR recommendations represent scientific advice to the Trilateral Governmental Council about priority issues that need further attention.

The Trilateral Governmental Council, as the politically responsible body of the TWSC, meets generally every four years at the TGC, which serve to assess the implementation of the planning instruments in terms of policy and management and to prioritise the issues that need further attention. Trilateral Governmental Council meetings result in Ministerial Council Declarations and the adoption of annexed strategies and plans, which completes the management cycle.

Since the time of inscription, the World Heritage status has been an integral part of all phases of the Wadden Sea management cycle.

## 4. Climate Change Vulnerability and Adaptation

### 4.1 Climate Stressors in the Wadden Sea

Three key climate stressors impacting the Wadden Sea OUV in a time frame of 50 and 100 years were identified by applying the Climate Vulnerability Index (CVI) rapid assessment method: 1) temperature trend (air and/or water), 2) extreme temperature events and 3) sea level rise (see the CVI report<sup>9</sup>). In a “business as usual” scenario, representing the most probable outcome of current greenhouse gas emissions policies worldwide, the OUV vulnerability was assessed high, meaning there is potential for major loss or substantial alteration of the majority of the key values that convey the OUV. Enhanced sea level rise may seriously affect structure, functions, and the characteristic biodiversity of the Wadden Sea ecosystem. As substantiated in trilateral reports of the former working group on coastal protection and sea level rise in the Wadden Sea (2005<sup>10</sup> and 2010<sup>11</sup>), strong sea level rise may lead to a significant reduction in tidal flats and salt marshes as well as in safety of the inhabitants of the region. Furthermore, climate change may severely impact the present distribution and abundance of species. Also, additional climate stressors (like precipitation trend, storm surge, ocean acidification) may have an impact on the OUV.

### 4.2 Adaptation and Mitigation Agreements

Adaptation measures in the Wadden Sea are guided by the Trilateral Climate Change Adaptation Strategy<sup>12</sup>, which was adopted by the responsible ministers in awareness of these implications at the 12th Trilateral Governmental Conference on the Protection of the Wadden Sea in Tønder, Denmark in 2014. The aim of this strategy is to enhance and promote policies and measures necessary for increasing the natural resilience of the Wadden Sea. A trilateral expert group evaluates the possible impacts of climate change and looks at possible strategies for adaptation in the Wadden Sea region. In order to successfully counteract or minimise these impacts to the extent possible and to restricting measures to what is necessary, seven strategic objectives and guiding principles are considered, such as the use of natural dynamics and flexibility, interconnectivity of habitats as well as site-specific approaches, trilateral cooperation with long-term planning, and the participatory approach. The seven principles are being applied in a wide range of projects and policies in the trilateral Wadden Sea Area. The implementation of the strategy focuses on trilateral cooperation, not only in the application of responses, but also in the areas of policies and management, monitoring and evaluation, and communication and education. Particular attention is paid to sea level rise and increasing sea and air temperatures, also underlined by the CVI process results.

Responses to adapt to sea level rise build upon locally and regionally established scientific and technical support. These might have significant influence on the OUV as they will most likely lead to an

increase of activities for coastal flood defence and protection, such as dike strengthening and sand nourishments. Limited responses for adaptation are currently known and ready to implement to adapt to increasing air and water temperatures or extreme temperature events thus improved knowledge is needed to develop additional management options.

Imperative for combating climate change impacts are local and global climate mitigation measures, such as CO<sub>2</sub>-reduction as outlined in the Paris Agreement on Climate Change of 2016. Mitigation measures in the Wadden Sea aim towards developing the Wadden Sea Region into a CO<sub>2</sub>-neutral area by 2030, putting the focus on the special threats for coastal zones by global warming and sea level rise”. Thereby, agreed to “support the global and national efforts to mitigate causes of climate change at the regional level, by calling especially upon local and regional competent authorities and stakeholders”. CO<sub>2</sub>-reduction policies and plans at the national and regional levels include the transition to renewable energy.

Potential conflicts as well as opportunities related to coastal flood defence and protection and renewable energy are addressed in Section 5.

### 4.3 Proposals for Management Activities

- Stimulate and maintain trilateral knowledge exchange and interdisciplinary discussions about, among other: best practices for adapting to climate change, projects for restoration and re-dynamizing of threatened habitats as an adaptation measure, methods to limit the damage or prevent negative impact of climate change on the OUV, the cumulative and combined effects of both climate change and human use to advise permitting procedures, water withdrawal and water management on the islands, improve knowledge about the potential effects of climate change on economic, social, and cultural aspects.
- Integrate and mainstream the Trilateral Climate Change Adaptation Strategy into all activity fields and make it more publicly known.
- Continue monitoring the Trilateral Climate Change Adaptation Strategy and embed the results in long-term trilateral climate change policies.
- Improve communication on OUV key values and climate change effects on the ability of the Wadden Sea to deliver ecosystem services in relation to economic, social, and cultural values.
- Reflect about the Wadden Sea as “blue carbon” ecosystem. As marine and coastal ecosystems naturally store carbon, a natural and resilient Wadden Sea ecosystem may play an important role in mitigating climate change.

## 5. Towards a Sustainable Management of the Wadden Sea

The World Heritage Convention (1972) commits each State Party with the duty of ensuring the protection, conservation, presentation, and transmission of the cultural and natural heritage to future generations. Since the beginning, the TWSC aims to protect the Wadden Sea. In the Joint Declaration (2010), the governments of the Wadden Sea countries renewed their commitment to continue to manage the Wadden Sea as a single ecological entity for its natural, landscape and cultural heritage values, for the benefit of present and future generations. As stated in the Wadden Sea Plan (2010) as the commonly agreed policy and management plan, human activities in ecosystems must be managed for all aspects: species, habitats, processes, and interactions.

The effective management of the Wadden Sea needs to assure nature conservation and an ecosystem approach that integrates the management of the existing protected areas with other key activities affecting the property, including the most important economic activities, whilst safeguarding the OUV. In this way, the continued priority for the protection

and conservation of the Wadden Sea is an overarching objective of the planning and regulation of use (Statement of OUV as adopted in 2014).

In line with the existing protection regimes, human uses have been combined as best as possible to the Wadden Sea World Heritage Site and surrounding area. Participation of the civil society in actions towards protection and sustainable use in the Wadden Sea Region is facilitated by the Wadden Sea Forum (WSF) and the Wadden Sea Team (WST) of environmental NGO's.

The level of integration of sustainable use and protection of the OUV regarding the prioritised key topics varies. Nevertheless, the Statement of OUV identifies the topics as requiring ongoing further attention.

This section contains the objectives setting the level of ambition for each of the five key topics, a summary description of the main risks and challenges associated with these topics and the enabling environment including basic agreements and common strategies, which constitute a favourable and conducive framework for future action. Finally, activities are outlined for all key topics based upon the site managers', experts', and policy makers' proposals. The described activities should be performed within the TWSC in collaboration with the competent authorities and relevant stakeholders. In the

implementation of the activities, the existing standards are to be maintained or, when necessary, improved to preserve and enhance the area's OUV. The implementation of the activities shall in no way lead to lowering the existing environmental standards.

Common to all five key topics' activities are:

- trilateral exchange of knowledge and best practices for the benefit of nature conservation management, and
- raising awareness/advocacy.

These have been major elements of the TWSC for decades and continue to be important. Trilateral knowledge exchange contributes to bring trilateral experiences together to build common approaches and thus to strengthen the Cooperation's joint arguments for nature conservation. Exchange of best practices at the trilateral level helps the speedy identification of the most beneficial practices for nature conservation. Consequent and consistent awareness raising, and advocacy may influence activities and behaviours in favour of maintaining the Wadden Sea's OUV. Trilateral knowledge exchange and advocacy activities need to be continuously improved to adapt to thematic as well as technological and societal changes.

## 5.1 Key Topic Fisheries

### Objective

Advance towards the implementation of the Framework for Sustainable Fisheries, which elaborates on the catalogue of principles about impact assessments, best practice, closed areas, monitoring and control, stock assessment, best available knowledge and learning by doing, with the fishing sector in a collaborative approach and **taking into account that the existing nature conservation standard should be maintained or improved.**

### Main risks

- Significant harm of habitats and species due to fishing and aquaculture activities including bycatch and overfishing, habitat destruction, negative effects of non-indigenous species, litter pollution, underwater noise and reduced recolonisation possibilities for reef-building and other species.
- Damage to vulnerable ecosystems, habitats, and species due to fishing activities in closed areas within the Wadden Sea World Heritage.
- Increase of fishing pressure in the Wadden Sea due to expanding other use of the EEZ (by for example offshore wind energy) which entail exclusion of fishery.

## Enabling environment

- Trilaterally agreed Framework for Sustainable Fisheries (Annex 3, Tønder Declaration 2014).
- Existing national effective good examples from fisheries and aquaculture management measures including closed areas for fisheries to learn from.
- Studies on ecological impacts and projects on best practices, transdisciplinary research and use of the results in management.

## Activities

1. The TWSC to **stimulate exchange of information, knowledge, best practices, management experiences** about fields of action especially important for their potential impact on the Wadden Sea World Heritage Site. The thematic exchange takes place at least twice per year and in the form of i.a. webinars, workshops, round tables inviting the groups of people related to the topic to come together. Depending on the topic treated, participants may include site managers, nature protection administrations, fishery administrations, aquaculture administrations, universities, research institutes, fisheries, aquaculture sector, and civil society. The **outcome of such exchange may lead to identify and develop,**

**where adequate, pilot studies** while including stakeholders and site managers.

**Potential** subjects for the **dialogue** process:

- a. Fisheries management measures including co-management of fishing activities, the effects of implementing management measures and regulations such as closed areas, spawning protection, and fish sanctuaries.
- b. Scenarios and risk analysis of shifting fishing areas in the context of the current and future EEZ use expansion.
- c. Ecosystem-compatible fishing techniques (results of projects).
- d. Permitting procedures, effective control mechanisms and future developments in fisheries including opportunities offered by digital methods.
- e. Mitigation, handling and monitoring of bycatch of undersized target species (e.g. flatfish, brown shrimps) and non-target species (e.g. invertebrates, protected species, migratory fish, sharks, rays, etc.), manipulation procedures to release bycatch alive.
- f. Recreational fisheries (status and significance, including ecological impact and best practices).

2. The TWSC to **collect relevant information on the most important types of fisheries taking place and the potential upcoming types of fisheries in the Wadden Sea**, especially shrimp fisheries and blue mussel fisheries (and other forms of fishing with potential negative impacts on the ecosystem or species) which are gathered by the national competent fisheries authorities. This should be complemented by geographic and legislative information of closed areas within the World Heritage Site. **The information gathered, which could be managed at CWSS, will serve as a basis for selecting topics and assessing the appropriateness of complementary approaches to be pursued for an exchange on a trilateral level to implement the Framework for Sustainable Fisheries.**
3. The TWSC to **discuss and propose how to organise the exchange and information management** within the remit of the cooperation considering the fisheries mentioned above, their management, and national policies in the Wadden Sea. This should be organised efficiently and effectively **in order to keep an overview of other existing groups treating fisheries and aquaculture at the local, national, and regional levels (e.g. MSC, OSPAR, North CFP Scheveningen Group) and feed the relevant info for the Wadden Sea World Heritage to the TWSC.**
4. The TWSC and the fishing schools to **continue to improve the awareness** of the Wadden Sea World Heritage values and vulnerability, location of closed areas, their need and potential benefits, ecosystem-compatible and sustainable fishing techniques and fishing gear, waste prevention and the problems associated with marine litter (e.g. ghost nets, dolly ropes). This can be accompanied by information to the broad public through visitor and information centres, and the work of the International Wadden Sea School (IWSS).
5. The TWSC to encourage the science and fisheries sectors to **develop and test new methods and practices in areas with existing/current fisheries**, e.g. further sustainable and ecosystem-compatible fishing techniques and practices with the aim of reducing impacts on the sea bottom and by-catch, and to share the knowledge gained to foster their implementation.
6. The TWSC to through the trilateral groups responsible for science and fish to **initiate fish research** (e.g. quantity and quality, ecosystem function, nursery function for juvenile fish, endangered species, food chain) **to support the OUV and sustainable management.**
7. The TWSC to produce a coordinated proposal to contribute to reaching the objective of the EU Biodiversity Strategy for

2030 of at least one third of the protected area for strict protection.

## 5.2 Key Topic Tourism

Sustainable tourism in the Wadden Sea World Heritage includes a range of aspects from services offered in the region (i.e. accommodation, public transport), nature experience, health and wellbeing activities, destination marketing, to certification and promotion of sustainable offers, communication, as well as management to avoid negative impacts and to promote the conservation of the Wadden Sea ecosystem. In the SIMP, the agreed activities focus on the nature conservation aspect of the holistic view of sustainability.

### Objective

Maintain and increase the support of visitors, local entrepreneurs, destination marketing organisations and other stakeholders in the tourism sector for nature conservation by continuing to advance the implementation of the Sustainable Tourism Strategy and Action Plan in the work fields: tourism operations and nature conservation, One World Heritage destination, transport, accommodation and gastronomy, environmental education and interpretation and capacity building and raising standards in a collaborative approach.

### Main risks

- Negative effects of existing touristic activities especially those of high intensity on the fauna, flora, and habitats of the Wadden Sea.
- Damages on the environment caused by infrastructure for tourism in the Wadden Sea World Heritage Site and adjacent region.
- Disturbances caused by future trend recreational activities and sports.
- Increased pressure on the system due to future growth of number of guests and the associated spatial demand.
- Possible increase of emissions and pollution in relation to tourism.

### Enabling environment

- Existing trilateral Sustainable Tourism Strategy and Action Plan developed by the TWSC together with Stakeholders and NGOs (Annex 1, Tønder Declaration 2014).
- The trilateral network group including stakeholders and NGOs collaborates on the implementation of the Strategy since several years and coordinates the regular update of the Action Plan.
- Existing national experiences and best practices to share.

- Visitor centres and other information and education facilities, rangers and NGOs promoting nature friendly visitor behaviour
- Existing projects that support international collaboration and exchange.
- The trilateral Partnership Hub as a management structure to enhance networking, better achieving joint intersectoral agreements on common projects and activities.

### Activities

1. The TWSC to **continue to improve the awareness** of the Wadden Sea World Heritage environment, suitable behaviour at the sites, and the motivations to maintain or improve the environmental quality **by providing consistent information for the sites**, through visitor centres and partnership programmes.
2. Dependant on their specific competencies in the three countries, **continue or start to connect site managers to the Sustainable Tourism Strategy** in order to add their expertise on nature conservation. If necessary, they could be asked to provide advice on the effectiveness of the current national/local policies on sustainable tourism. Involvement of site managers is focussed on their experience in the field and their country specific role in monitoring, visitor management, surveillance, and enforcement. **Desired results could be, where adequate or needed, the improvement of visitor management or zoning schemes, taking into account that the existing nature conservation standard should be maintained or improved.**
3. The TWSC, through the responsible trilateral group, to **strengthen initiatives for cross-border cooperation for fostering the nature conservation** aspect of sustainability in tourism by:
  - a. Addressing gaps of knowledge regarding the impacts of tourism on the OUV, i.a. by research projects.
  - b. Analysing existing national monitoring data in terms of effects from tourism and considering cumulative effects (obligation in Habitats Directive in case of projects or plans seeking permission).
  - c. Developing appropriate trilateral tools to support visitors understanding for suitable and required behaviour in the natural environment and towards wildlife, while making the experience of nature possible,
  - d. Improving the Wadden Sea World Heritage brand visibility emphasising that it promotes nature conservation via responsible tourism practices and according to the Sustainable Tourism Strategy and Action Plan,

- e. Enhancing coordination of the various supra-regional and regional projects and activities.
- f. Exchanging information about training and education initiatives.
- g. Strengthening and expanding the communication and collaboration with the authorities, agencies, and SMEs responsible for touristic activities.
- h. Strengthening interdisciplinary dialogue and research between natural and social sciences about values in nature conservation, protected area management and sustainable development.

### 5.3 Key Topic Shipping and Ports

#### Objective

Further improve shipping safety, build on the current high status of prevention of accidents, preparedness and emergency response and foster nature friendly operations including the maintenance of ports, enhance awareness, education, and cooperation in a collaborative approach at trilateral level.

#### Main risks

- Potential ship accidents resulting in the release of pollutants.
- Pollution from ongoing shipping operations including discharges of scrubber washwater, the use of dispersants in

- emergency response operations and the introduction of alien species, esp. by ballast water and biofouling.
- Disturbances due to underwater noise from ships and physical impacts from collisions with marine mammals and displacement due to visual disturbance.
- Negative impacts on natural dynamic processes due to dredging and dumping of dredged material.
- Increase of disturbance, accidents (collisions) and other negative impacts due to marine traffic including water sports.

#### Enabling environment

- The Wadden Sea is a Particularly Sensitive Sea Area (PSSA). The TWSC Operational Plans for the Wadden Sea PSSA aim to improve on prevention of accidents, operational pollution, awareness and education, preparedness and response and cooperation.
- As contracting parties of the OSPAR Convention, the three countries are required to apply Best Available Techniques (BAT) and Best Environmental Practice (BEP) including, where appropriate, clean technology, in their efforts to prevent and eliminate marine pollution.

## Activities

1. The TWSC in cooperation with the competent national authorities, to **discuss the further implementation of the Operational Plans for the Wadden Sea PSSA** (Annex 5, Tønder Declaration 2014), and including issues proposed by the nature conservation site managers and an assessment of the response capacity to shipping accidents in each country.
2. The TWSC to **stimulate and facilitate trilateral exchange and dialogue** among site managers and involving the experts and/or institutions working on e.g. the following points with direct impact on the Wadden Sea World Heritage Site and its key values and taking in consideration other ongoing initiatives and groups at the national and regional levels (such as e.g. MSFD groups dealing with underwater noise, speed limits, definition of Good Environmental Descriptors for under water noise, OSPAR groups handling sediment movements regulations). This trilateral **exchange can result in the identification of priorities to address with related sectors (Activity 3) or in technical papers providing advice:**
  - a. Introduction of speed limits in or close to vulnerable areas if not in place or inadequate.
  - b. Improvements of ships to e.g. lower noise emissions, use electric motors (initiatives and rules at the EU and international levels).
  - c. Research about the impacts of noise on marine animals (especially species with little investigation such as diving birds, fish, and invertebrates).
  - d. Possibility to develop Wadden Sea wide nature friendly navigation guidelines for marine traffic in the property considering the existing local (federal states, provinces, municipalities), national and regional (EU, North Sea) regulations.
  - e. Research and exchange on nature friendly practices for dredging of shipping lanes and within Wadden Sea ports and related dumping (existing regulation, studies, good practices), where dredging and dumping is unavoidable.
  - f. Identification and research on potential effects of climate change and adaptive measures for shipping and ports on the OUV of the Wadden Sea.
  - g. The Wadden Sea PSSA in the framework of IMO including Associated Protective Measures and the Operational Plans.
3. **Site managers to participate as nature conservation stakeholders in trilateral initiatives** involving shipping authorities, ship-owners, seafarer associations, and harbour operators, the Wadden Sea

Forum, and the Wadden Sea Team of environmental NGOs **to discuss about specific priorities and explore ways to implement and/or make use of:**

- a. Best practices (showcase exemplary cases of environmentally friendly practices in ships and ports e.g. regarding the use of ship fouling for controlling the spread of introduced species -in recreational and commercial shipping-, environmentally friendly ports);
  - b. Effective ship traffic and container tracking systems and monitoring.
  - c. International standards regarding e.g. safety, speed limits, and pollution.
4. The TWSC in communication with the competent authorities, the site managers and stakeholders, to **raise awareness and education** among shipping and ports stakeholders about e.g. the Wadden Sea World Heritage values and vulnerability, best practices, the existing regulations and standards regarding safety, speed limits/zoning, pollution, introduction of invasive species.

## 5.4 Key Topic Energy

### Objective

Intensify the application of common best practices to protect the Wadden Sea, to support a nature friendly energy

transition, and to foster a level playing field at highest applied environmental standards for all three countries in a collaborative approach with the energy sector.

### Main risks

- Impairment of habitats (especially sea floor) and disturbance of natural processes within the Wadden Sea World Heritage due to cable and pipeline laying.
- Disturbances of the natural migratory routes as well as mainland areas for breeding and resting birds, as well as increased risk of collisions with animals due to energy plants construction near the Wadden Sea World Heritage and ongoing operations, including the risk of accidents causing the release of harmful substances.
- Future steep increase in number and density of plants and transmission infrastructures including increased maintenance and supply traffic to meet the raising energy transition targets will exacerbate risks within the WSWH and in adjacent areas.
- Ground surface subsidence caused by gas exploitation and salt mining may affect habitats and species and in the future its effects can be exacerbated by sea level rise.
- Unknown effects of new types of energy production and transmission including hydrogen production, transport and storage and potential carbon capture and storage.

## Enabling environment

- Existing trilateral agreement (in the WSP 2010 and World Heritage Nomination Dossier) prohibiting the construction of wind turbines, and installations for oil and gas, and not allowing oil and gas exploration and exploitation in the WH property.
- Existing trilateral agreement supporting global and national efforts to mitigate causes of climate change at the regional level and to work towards a Wadden Sea Region as CO<sub>2</sub>-neutral area by 2030 (Sylt Declaration 2010).

## Activities

1. Site managers to **enhance and maintain dialogue and collaboration** with the agencies, energy companies and authorities responsible for spatial planning and technical design to:
  - a. Learn in time about future plans and projects related to energy transition near the Wadden Sea World Heritage and get involved early in the process of planning and design of projects.
  - b. Use the window of opportunity of planning and designing new projects to advocate for the application of best practices for the reduction of impacts from e.g.

emissions of light and noise, implementation of buffer zones and functional safety distances.

- c. Compile lessons learned from the most advanced projects and from pilot projects and share this knowledge trilaterally (Activity 2).
2. The TWSC to facilitate **trilateral exchange in regular events** for site managers involving the experts and/or institutions working on e.g. the following points with direct impact on the Wadden Sea World Heritage Site and its key values. This trilateral **exchange can result in the identification of priorities** to discuss with the agencies, energy companies and authorities responsible for spatial planning and technical design **or in technical papers providing advice on:**
    - a. Cable and pipeline laying: optimisation of routing and laying techniques, research on cumulative effects, application of EIA Law and avoidance and mitigation of impacts of the upcoming planning and building of new subsea cables and pipelines. This exchange could lead to the development of a common Mitigation Toolbox and enhanced transboundary coordination of integrated grids and interconnectors.
    - b. Potential impacts of large-scale solar platforms, floating solar plants in the offshore area on the marine ecosystem and other renewable energy installations in

- the Wadden Sea World Heritage: influence on key values of the Site, especially bird migration.
- c. Feasibility of alternative technologies to transport energy from offshore wind farms to the mainland or to places of energy consumption, especially hydrogen technology, including the assessment of potential impacts on the marine ecosystem and bird migration.
  - d. Risk assessment of carbon capture, storage, and transport future technology.
3. The TWSC to extend the existing trilateral agreement (in the WSP 2010 and World Heritage Nomination Dossier) prohibiting the construction of wind turbines, oil and gas exploration and exploitation, and construction of new installations for oil and gas in the WSWH Site to other upcoming large-scale forms of energy capturing platforms like solar panels.
  4. The TWSC through the trilateral groups responsible for energy and for research and in collaboration with the relevant groups and experts, to **formulate relevant research questions to investigate (potential) effects of new types of energy production, storage and transmission** while considering nature conservation management (and when possible, develop trilateral research projects).

## 5.5 Key Topic Coastal Flood Defence and Protection

### Objective

Enhance the use of nature friendly measures and maintenance practices in a collaborative approach with the competent authorities, considering the Climate Change Adaptation Strategy, which aims at natural resilience to climate change effects and consists of seven basic elements: Natural dynamics, interconnectivity, integration, flexibility, long-term approach, site specific approach and participation.

### Main risks

- Alterations of the natural dynamic processes and the biodiversity of the Wadden Sea Cooperation Area due to the existing measures (for example fixation of the coastline due to i.a. dikes, loss of tidal flats and alteration of sediment supply (and salt) and erosion due to construction of groins, revetments and extraction of sand and clay, loss of connectivity due to existing structures and their maintenance).
- Increase in number and size of coastal flood defence and coastal protection measures to adapt to sea level rise may cause habitat and species loss. Sea level rise may cause difficulties with inland drainage i.e. tide gates are being converted into pumping stations that hinder connectivity between Wadden Sea and mainland.

## Enabling environment

- Existing trilateral Climate Change Adaptation Strategy (CCAS) with guiding principles aiming to improve resilience of the Wadden Sea Region to climate change for the benefit of nature conservation the safety of the inhabitants and visitors (Annex 4, Tønder Declaration 2014).
- Existing permanent expert group which stimulates the implementation of the CCAS and updates the priorities, supports initiatives for knowledge exchange, studies to assess effects of climate change as well as adaptation measures.
- Existing knowledge and experience that site managers have in combination with the existing good cooperation with the coastal flood defence and protection agencies.

## Activities

1. Site managers to **enhance and maintain communication and collaboration** with the agencies and authorities responsible for coastal flood defence and protection to:
  - a. Use the window of opportunity to introduce, where adequate and feasible no-regret measures<sup>13</sup>, nature-based solutions<sup>14</sup> when alterations or new coastal flood defence and protection structures are planned.
2. The TWSC, to stimulate and facilitate regular **trilateral exchange** among site managers to:
  - a. Continue to- and strengthen sharing best practices, experiences, and knowledge about specific topics of interest (e.g. nature-based possibilities for coastal flood protection and defence (no-regret measures), good practice examples for coherence and compensation measures, relocation of (summer-) dikes, dune overwash).
  - b. Formulate relevant research questions to investigate potentials to restore natural dynamics, nature-based solutions, nature friendly adaptation measures and compensation measures and when possible, develop trilateral research projects.
  - c. Continue to support and stimulate, where necessary, the agencies and authorities responsible for coastal flood defence and protection to implement more
    - b. Advocate for considering the Wadden Sea World Heritage OUV in the application of environmental impact assessments and regulations.
    - c. Encourage cooperation of site managers and the agencies and authorities responsible for coastal flood defence and protection in pilot projects.

environmentally friendly solutions contributing to the safeguarding of the OUV.

3. The TWSC through site managers and, where not being part of it, the responsible nature conservation authorities, to **continue to improve the awareness** of the Wadden Sea World Heritage natural geological dynamic processes (sediment dynamics), the role of natural factors in coastal protection (islands, dunes, saltmarshes), the significance of

river and marsh water body connectivity for fish and ecological processes, the role of tidal processes for some coastal habitats, among authorities and agencies responsible for planning, construction and maintenance of coastal flood defence and protection measures. This shall be accompanied by information to the broad public through visitor and information centres, and the work of the International Wadden Sea School (IWSS).

## 6. Complementary Activities to Support Management

### 6.1 Science and Research

The more than four decades long Trilateral Wadden Sea Cooperation (TWSC), is based on science and research. To assess the status of implementation of the targets of the Wadden Sea Plan (WSP), reliable scientific evidence is crucial. The Trilateral Monitoring and Assessment Programme (TMAP), which also underpins the criteria for the inscription on the UNESCO World Heritage List, provides the necessary information in this regard. By regularly publishing Wadden Sea Quality Status Reports (QSRs), in which more than 100 scientists (QSR 2017) from the three Wadden Sea states are involved, the development of the Wadden Sea ecosystem is described, and trend analyses are reported (more detail in Section 6.2. Monitoring and Assessment).

Upon the invitation of the TWSC, the scientific community from the Netherlands, Germany and Denmark was invited to develop a Trilateral Research Agenda. This Trilateral Research Agenda gives an overarching, comprehensive, and integrated view on the trilateral research needed in the Wadden Sea Region. It focuses on three challenges addressing human-nature interactions, coping with

climate change and sea level rise, and working towards a sustainable coastal region. Concrete research topics relevant for the management of the Wadden Sea Region are laid down in thematic lines touching upon 1) climate, water, sediments and subsurface, 2) ecology, biodiversity, and spatial processes, 3) cultural heritage, identity, and historical embedding and 4) economy, society, and sustainable development. Further integral parts of the Trilateral Research Agenda are monitoring, organisation and funding and outreach, communication, and education. The TRA<sup>15</sup> was welcomed at the last Trilateral Governmental Conference (TGC, Leeuwarden 2018). To strengthen the cooperation with the scientific community a Trilateral Programming Committee on Wadden Sea Research (TPC) was installed in order to establish a joint programme on research issues relevant to the Wadden Sea World Heritage, taking into account the TRA. The members of this Committee represent science and policy-management of the three states.

### Challenges and Outlook

The TPC will serve as focal point to foster science cooperation and applied research on the Wadden Sea World Heritage Site. Part of the assignments given to the TPC also includes the exploration of funding possibilities.

The incorporation of upcoming management requests resulting from the SIMP process is encouraged to be considered in the agenda of the TPC and/or in the Joint Trilateral Programme on research issues relevant to the Wadden Sea World Heritage.

## 6.2 Monitoring and Assessment

The main technical purpose of monitoring the ecosystem and human activities is to collect data necessary for a scientific evaluation of the status of the ecosystem and the intensity and impact of human use and its implications to the system. This scientific assessment is an important basis for the formulation of policies and measures. Scientific knowledge is a prerequisite for the development of appropriate monitoring, for the application of assessment criteria and for the formulation of policy goals for the protection of the ecosystem.

The TMAP covers the entire Wadden Sea Cooperation Area and spans a broad range from physiological processes over population developments to changes in landscape and morphology. The TMAP was implemented based on a decision made during the TGC in Stade 1997 and has been further developed to also respond to the needs of various national and international monitoring obligations; in particular those from the EU Habitats, Birds, Water and Marine Strategy Framework Directives, and since the inscription of the Site the World Heritage reporting.

Due to the further development of the reporting under these directives, the TWSC aims to foster the adjustment of the TMAP to today's obligations (for example climate change and its impact) and to guarantee a future-proof approach with the necessary synergies with existing monitoring programmes. Focus is also on increasing

the visibility and outreach of the TMAP and the advantage as a sound basis for reporting through the QSR (TMAP strategy, 2014).

The QSR Thematic Reports are written by scientists in consultation with relevant TWSC groups and edited by an Editorial Board in cooperation with CWSS. The QSR Thematic Reports are updated at regular intervals based on data availability, trilateral events, or emerging issues. A QSR Synthesis will combine the findings from the Thematic Reports and will be issued prior to the TGC every four years, to provide a condensed overview on the status of the ecosystem with relevant information for management and decision making.

### Challenges and Outlook

In the coming years new requirements may apply for the TMAP. These requirements may be influenced by or have an influence on (new) trilateral policies and plans (like the SIMP), among other these could be:

- Impacts of climate change (see the Trilateral Climate Change Adaptation Strategy, CCAS)
- Invasive Alien Species (see the Trilateral Management and Action Plan for Alien Species (MAPAS))
- Tourism management (Sustainable Tourism Strategy)
- Other trilateral strategies (such as the WSFI) serve as roof for the TMAP parameters

- EU Directives, Habitats Directive (Habitat types with unknown status, especially sublittoral), Marine Strategy Framework Directive (Wadden Sea relevant descriptors), Birds Directive, Water Framework Directive, and Alien Species Regulation
- Marine litter and new pollutants

Proposal for new or amended parameters and methodologies will be weighed and coordinated by the trilateral group responsible for monitoring and assessment in close cooperation with other trilateral expert and task groups, also considering input from relevant research and monitoring projects.

### 6.3 Knowledge Management

The TWSC is a globally outstanding example for the knowledge and experiences it holds when it comes to policy, management, research and monitoring of a large-scale mudflat and barrier islands ecosystem. To make this knowledge available to site managers and stakeholders has high priority for the TWSC. Management of the Wadden Sea as a single ecosystem shared by three countries, requires knowledge of the entire system. A milestone to collect and make this knowledge available started with the Wadden Sea network of engaged scientists in the 1960s. This resulted in the first scientific Wadden Sea symposium 1975 where scientists called for a better protection of the Wadden Sea and a trilaterally coordinated effort. Today, the scientific symposia, which take place about every

four years, play a crucial role in the TWSC, by enhancing exchange between scientists, site managers, and stakeholders, and giving advice to the TGCs.

The CWSS, since its establishment in 1987, has developed into a trilateral “knowledge management hub”, providing access to data, publications and reports relevant for trilateral policy, management, research, and monitoring.

The annual Wadden Sea Day, dealing with management and research topics, supports exchange between site managers and provides the most recent knowledge across the three countries.

Trilateral working groups on expert and manager levels meet regularly to compile, assess, and provide recommendations for the three governments. They connect local and national management with trilateral management and policies.

On an international level, an ongoing exchange of knowledge and experiences with site managers from other Marine World Heritage Sites or mud-flat ecosystems sites is carried out to enhance understanding of natural systems and how to manage them.

#### Challenges and Outlook

The main challenge today, is how knowledge creation and exchange can be organised trilaterally and passed to the next generations. Furthermore, how diverse target audiences can be actively involved across various topics and governance structures.

New forms of cross-sector collaborations (such as “communities of practice” which are organised groups of people that collaborate regularly to share information, improve their skills, work on advancing the knowledge on a specific topic of their common interest) could be developed to foster knowledge exchange trilaterally. In addition, an enhanced use of appropriate technologies could be considered (such as knowledge bases, expert systems, information technology cooperative work and data exchange) to support effective and positive experiences during exchange and collaboration.

#### **6.4 Education for Sustainable Development and Interpretation**

Visitor information, environmental education, and offers for nature experiences have evolved throughout the Wadden Sea regions for several decades and are provided by various organisations and networks (public, private, NGOs) with over 65 information facilities (from small information points to large visitor centres).

Education, information, interpretation, and awareness building are obligations that ensue from the World Heritage Convention and inscription on the World Heritage List. In order to protect and maintain the OUV of the Wadden Sea it must be known, understood and respected. Thus, the interpretation of the Wadden Sea World Heritage Site is essential for a broad acceptance of and support for the long-term protection of the Wadden Sea.

The Wadden Sea Strategy on Education for Sustainable Development and World Heritage Interpretation<sup>16</sup>, adopted in 2018, provides a transboundary framework for environmental education and interpretation in the entire Wadden Sea World Heritage Site. It builds on the local, regional, and national concepts and activities with the aim to promote the Wadden Sea’s OUV in a transboundary and interdisciplinary approach. It also addresses the qualification and training on a national level, to enable multipliers to integrate the trilateral and global context into their daily work.

At the trilateral level, the trilateral group responsible for education oversees the implementation of the strategy with the coordination of joint activities provided by the International Wadden Sea School<sup>17</sup> (founded by the TWSC and nature NGO’s in 2003) in cooperation with the CWSS.

At the national level, the activities are coordinated by the respective national site managers and stakeholders according to the individual national strategies and concepts.

The strategy links and contributes to the implementation of other important strategies for the Wadden Sea, namely the Sustainable Tourism Strategy<sup>18</sup>. It also contributes to the UNESCO Programmes for “World Heritage Education” and “Education for Sustainable Development”.

## Challenges and Outlook

Engaging the diverse multipliers in cross border cooperation and enhancing their trilateral and World Heritage perspective remains an ongoing process and is an integrated part of education and information.

The provision of trilateral information, education and interpretation resources will enhance the quality of information and support consistent communication of the OUV across the regions. Visitor centres, visitor information systems and educational resources, as well as guided tours, class trips and seminars are provided on the national level and networks.

## 6.5 Communication

Communication is vital to make the Wadden Sea World Heritage Site known, understood, respected and appreciated, and to support the protection of the site and maintain its OUV. The TWSC follows a joint Communication Strategy that includes the World Heritage designation.

The key audiences of the communication activities are politicians, nature conservation agencies, national parks, scientists, research institutions, environmental NGOs, national park partners, the local population and tourism marketing organisations. Beyond the TWSC, the audiences are the broader public and media.

The strategy defines four different approaches to be applied to the different target audiences according to their needs: scientific, popular science, general public including young people and child oriented. The strategy includes key messages about the Wadden Sea World Heritage Site, as well as other topics related to the TWSC. The key messages serve as input to partners, stakeholders and others while communicating about the Wadden Sea World Heritage Site.

The CWSS coordinates trilateral communication activities among its partners, e.g. the publication and updating of general information on the Wadden Sea World Heritage Site (website, leaflet, video, etc.). At the national level, the communication strategy is implemented by the site managers and stakeholders and integrated in the individual communication strategies and concepts.

The approach to treat the Wadden Sea World Heritage Site as a brand, and the development of a brand management toolkit, is quite unique. The Wadden Sea World Heritage Brand Paper and Brand Activation Guide are the tools that underpin this approach and aim to go beyond a graphical design guidance by creating a sense of place to continuously strengthen ownership.

The Communication Strategy, as well as all brand related tools (including the design manual) are accessible to all via the website [www.waddensea-worldheritage.org](http://www.waddensea-worldheritage.org). Stakeholders can also use the Brandspace platform<sup>19</sup> to obtain information on the Wadden Sea World Heritage Site brand and logo use. The platform also gives

access to marketing material (texts, videos, photos) to use in their Wadden Sea World Heritage Site communication efforts.

### **Challenges and Outlook**

World Heritage communication and co-branding at national and trilateral levels must reach consistency. The communication of the TWSC concept and objectives to internal partners and the public can be challenging. The global dimension of the Wadden Sea World Heritage and the shared ownership to safeguard its OUV for present and future generations is an essence in the communication of multipliers at trilateral, national, regional, and local level.

In the future, it is aimed to creating a pronounced profile of the TWSC and World Heritage communication principles and providing internal partners with a TWSC communication strategy which can be easily applied.

## **6.6 Collaborations and Partnerships**

Local supporters have been of crucial importance in the protection of the Wadden Sea whether as individuals, enterprises or NGOs. The involvement of civil society at all different levels continues to be a great strength for the protection and sustainable development of Wadden Sea Region. Numerous site-specific partnership initiatives at local and regional levels, involving local businesses and communities, offer high-quality products and services from the region and by operating in an environmentally friendly manner.

Local partners support protection and help to raise awareness for nature conservation and sustainable development among guests and locals.

The inscription of the Wadden Sea on the World Heritage List offered a further step and a unique opportunity to pool and strengthen the existing skills and experiences under one umbrella to ensure the protection and preservation of the Wadden Sea, whilst continuing to foster sustainable regional development within the entire Wadden Sea Region. Along this common path, the Trilateral Partnership in support of the UNESCO Wadden Sea World Heritage was founded in 2019, based upon the above mentioned existing proven structures and networks with a long history of achievements and contributions. The strategic partners including the Wadden Sea Forum, the Wadden Sea Team of environmental NGOs, the trilateral group responsible for sustainable tourism, the trilateral science community and the WSB chair representing the TWSC have been the first signatories of the Memorandum of Understanding sealing a mutual commitment to enhance the Wadden Sea World Heritage Site.

The management and organisation of the Trilateral Partnership is supported by the Trilateral Partnership Hub (the Partnership Hub). The Partnership Hub facilitates the strategic partners collaboration in effective and trustful relationships, while sharing information, knowledge, and experience. The Partnership Hub is intended to initiate and help with the planning of specific trilateral projects, common actions and assist with applications for funding.

## **Challenges and Outlook**

The Partnership Hub aims at broadening the engagement for the Wadden Sea World Heritage Site beyond the governmental sector and unlock potentials and resources for delivering on the goals and intended activities of the Trilateral Partnership as described in the Memorandum of Understanding. It will build and intensify pathways for collaboration towards the realisation of the (Trilateral Partnership's) vision and thus help to extend the network of strategic partners in line with the decisions of the TWSC and balanced intentions of the strategic partners while further considering the important role of the civil society.

All these forms of collaboration within the TWSC and with the business communities in the field of engagement with the World Heritage brand, marketing and sponsorship have and will be in line with the so-called 'five C's' recognised by the World Heritage Committee: Credibility, Conservation, Capacity Building, Communication and Community.

## 7. Global Dimensions

### 7.1 Global Interconnections

The global dimension of the Wadden Sea is not only apparent in its status as World Heritage property, but also in the fact that it is highly interconnected with other sites. In the statement of OUV it is explicitly mentioned that the Wadden Sea ecosystem sustains wildlife populations well beyond its borders and biodiversity on a worldwide scale is reliant on the Wadden Sea.

Many of the challenges for the Wadden Sea's management are faced by protected areas all over the planet, such as the protection of migratory birds, dealing with impacts of climate change on ecosystems, or reduction of marine litter. This calls for close collaboration with partners beyond the Wadden Sea, since what may happen outside the Wadden Sea (for example in the Arctic or in Africa) may have consequences for the management in the Wadden Sea (such as is the case with the protection of birds) and vice versa. The preservation of the Wadden Sea's World Heritage key values is greatly influenced by the successful management of the interconnected sites. This underlines the importance of supporting the protection of other sites along the flyways.

Following the request of the World Heritage Committee on the occasion of the inscription 2009, the Wadden Sea Flyway Initiative (WSFI) was launched in 2012 to foster collaboration along the

African Eurasian Flyways. The WSFI established a network of partners and important sites along the East Atlantic Flyway from the wintering sites along the West African seaboard through the Wadden Sea as essential staging site to the breeding sites in the Arctic areas.

**Figure 8.** The East Atlantic Flyway Globus.

Partners in almost 30 countries are working together to protect and manage their shared bird populations by cooperating in monitoring and capacity building activities. In the coming years, the WSFI aims for an autonomous bird management in the African partner

countries, to combat the impact of climate change for a resilient flyway and enhance the long-lasting cooperation with Arctic countries. Successful cooperation has been established with West-African countries in particular with the World Heritage Site National Park Banc d'Arguin in Mauritania (Memorandum of Understanding 2014), but also with the Bijagòs Archipelago in Guinea Bissau with regards to the protection of intertidal ecosystems.

## 7.2 International Cooperation

Putting the Wadden Sea on a global scene also offers new pathways for international cooperation, mutual learning and developing solutions for the preservation of the Wadden Sea in a rapidly changing world. Cooperation with other World Heritage properties also helps to raise the profile of the Wadden Sea internationally and within the World Heritage Convention.

The Wadden Sea World Heritage Site is contributing with its vast knowledge to support nomination efforts of future World Heritage properties. An exchange with the Yellow Sea countries has existed for many years, both are tidal mudflat ecosystems of global importance for being among other, stopover sites for migratory birds.

The Trilateral Wadden Sea Cooperation (TWSC) cooperates with the Republic of Korea (Memorandum of Understanding 2009) regarding the exchange of management experiences and

approaches, monitoring, research, education, and communication. Over the years this collaboration has involved in total over 2,100 persons at both sites. The TWSC also supported the Republic of Korea in the preparation of the World Heritage nomination dossier on the Korean Tidal Flats. The World Heritage Committee at its 44th meeting in 2021 decided to add the Getbol, Korean Tidal Flats to the World Heritage List under criterion (x).

Knowledge exchange will be the main topic of collaboration with the Yellow Sea countries, and aims to share scientific knowledge for management, strengthen the capacity for communication and education, and provide many valuable examples for practitioners which they can apply at their site. A collaboration between the globally significant flyway sites, such as the African-Eurasian Flyway and East Asian-Australasian Flyway, can promote a mutual exchange in improving flyway management and research in mud-flat ecosystems worldwide.

The UNESCO World Heritage Centre, which serves as the global Secretariat to the World Heritage Convention, not only manages all official processes around the Convention, but also runs thematic programmes to help State Parties and the World Heritage properties to implement the Convention.

Since its inscription on the World Heritage List the Wadden Sea has been an active contributor to the UNESCO World Heritage Marine Programme. This is a network of site managers from all 50 Marine World Heritage properties across 37 nations. Tapping into the vast

expertise contained within the network helps to accelerate achieving sustainable marine protected areas. Expertise is shared from across the network through site-to-site field visits, communication, and tri-annual global managers conferences.

The Wadden Sea also cooperates with the UNESCO World Heritage and Sustainable Tourism Programme. This Thematic Programme underlines the shared responsibility of stakeholders for conservation of cultural and natural heritage of Outstanding Universal Value and for sustainable development through appropriate tourism management.

As requested by the World Heritage Committee in 2009, a Strategy for Sustainable Tourism in the Wadden Sea World Heritage Destination was adopted in the Wadden Sea in 2014. Through regular exchange with the World Heritage Centre and stakeholders from other World Heritage properties, the Wadden Sea benefits from the networks when implementing or further developing the Sustainable Tourism Strategy and action plan. The Wadden Sea is acknowledged worldwide as a useful example of transnational collaboration, pooling resources, and engaging tourism stakeholders in the protection of the OUV for mutual benefit.

Engaging in international cooperation creates opportunities for sharing knowledge and experience in the management of World Heritage properties. Managers, NGO's, and other stakeholders active in the Wadden Sea World Heritage Site have used these

opportunities for mutual learning in areas such as protected areas tourism, monitoring and education.

### **7.3 Contributions to the EU Biodiversity Strategy for 2030**

The Wadden Sea World Heritage Site, as one of the largest protected areas in Europe, contributes to the EU Biodiversity Strategy for 2030<sup>20</sup>, most notably to the nature protection targets of protecting at least 30% of the EU's land and sea, with one third thereof for strict protection, but most importantly aids to build a coherent Trans-European Nature Network. The SIMP and the comprehensive management system of the Wadden Sea World Heritage Site including the Wadden Sea Plan (WSP) as joint management plan, can serve as a model for effective protected areas management.

Additionally, the management of the Wadden Sea World Heritage Site contributes to the nature restoration targets of “ensuring at least 30% of EU protected species and habitats are in favourable conservation status or have positive trends by 2030” and to “restore marine ecosystems”.

The Wadden Sea World Heritage Site, supported by the SIMP, also adds to the EU Biodiversity Strategy's transformative change targets such as “building on an integrated and whole-of society approach”, “ensuring the full and timely implementation of the EU nature directives” and “improving knowledge and research”. Targets such

as “tackle invasive alien species” are explicitly addressed in the TWSC’s own strategic approaches.

EU funding will continue to play an important role in advancing and enabling trilateral projects.

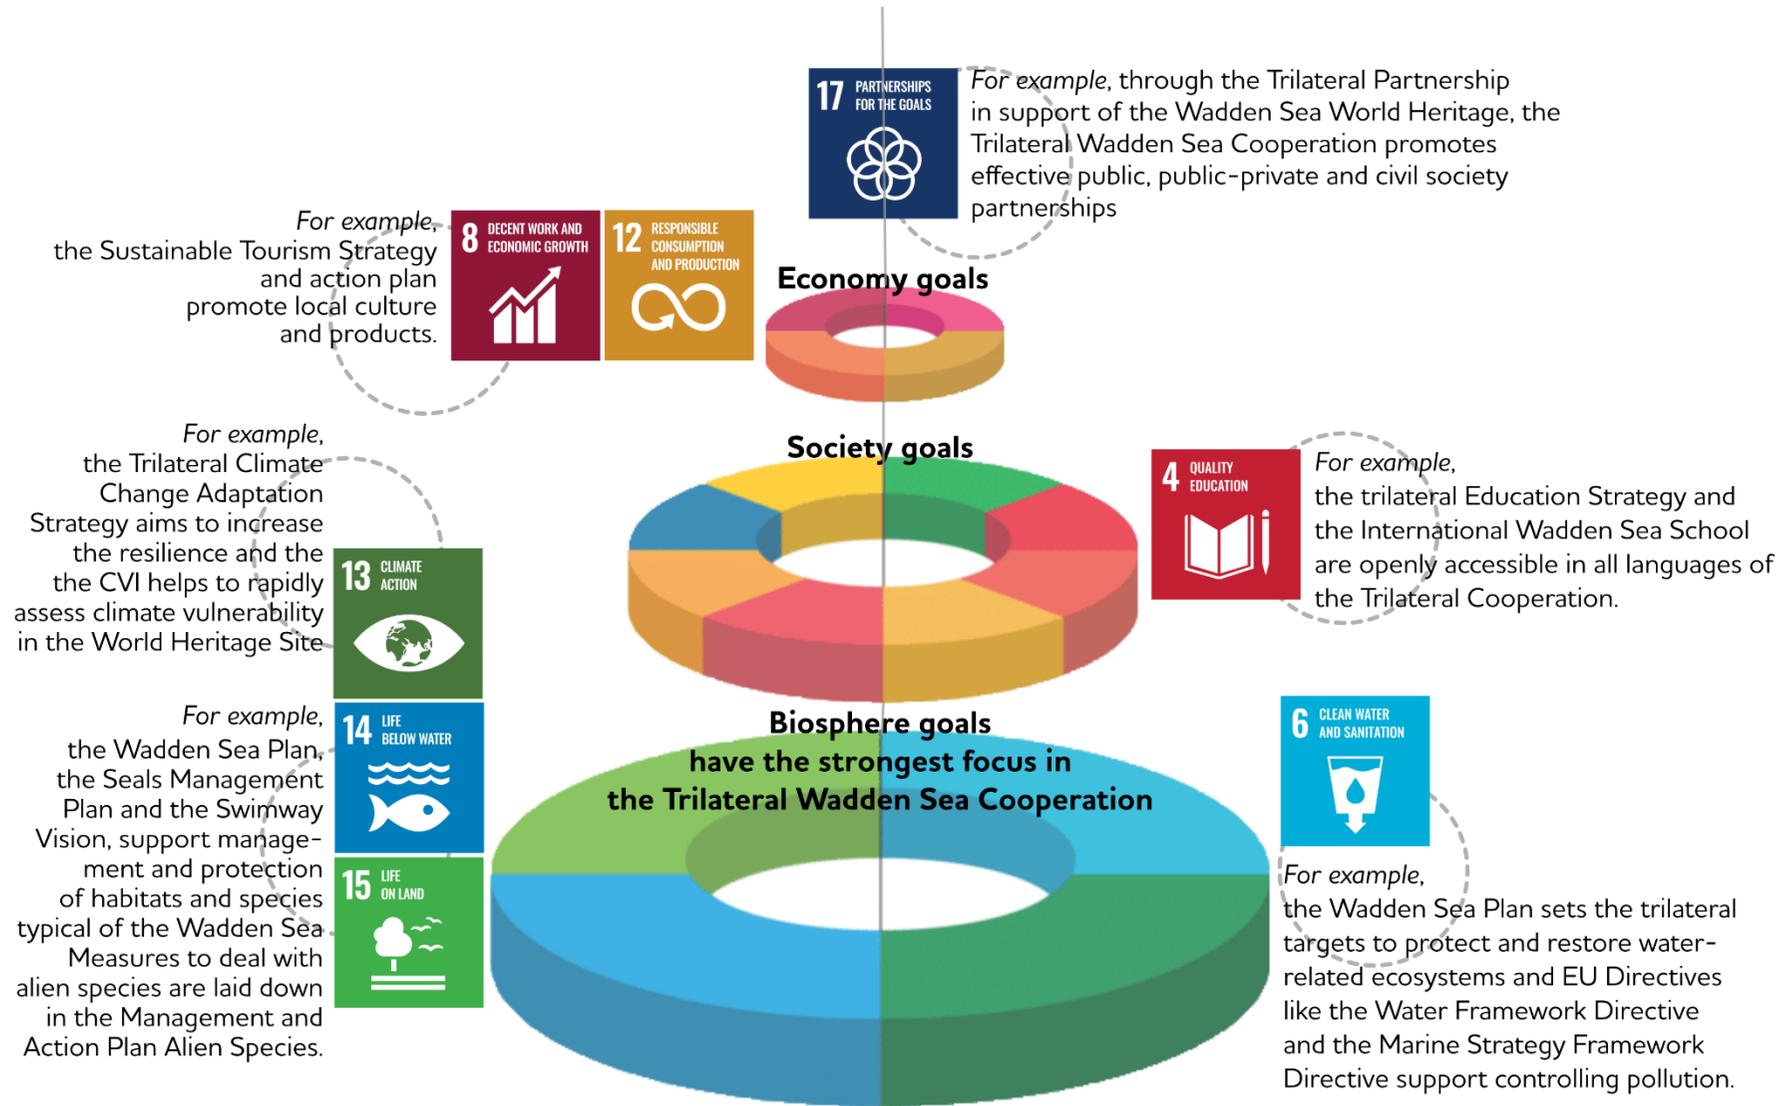

[Note: there will be a (new) “Post-2020 Biodiversity Framework” adopted by the CBD COP in the first half of 2022.]

can be added: “registered as transboundary, multi-stakeholder Partnership in the UN’s global registry on SDG partnerships”].

## **7.4 Contributions to the Sustainable Development Goals of the UN Agenda 2030**

The TWSC actively contributes to the implementation of the Agenda 2030 for Sustainable Development, with its globally accepted Sustainable Development Goals (SDGs). Not only does the Wadden Sea deliver important contributions to SDG 14 “Life under water” and SDG 15 “Life on land”, but it also strengthens the natural resilience and adaptive capacity to climate-related effects (SDG 13). Furthermore, the trilateral cooperation’s actions and plans to protect and restore water resources and water-related ecosystems contribute to SDG 6 and support the area’s sustainable economy and leverages local culture (SDGs 8 and 12). Education for sustainable development and the International Wadden Sea School, accessible in all languages of the cooperation, addresses SDG 4. The SDG 17 “Partnerships for the Goals” is contributed to by the “Trilateral Partnership in support of the Wadden Sea World Heritage” (Figure 10). [Note: After approval by the UN, in SDG17

# Annex 1

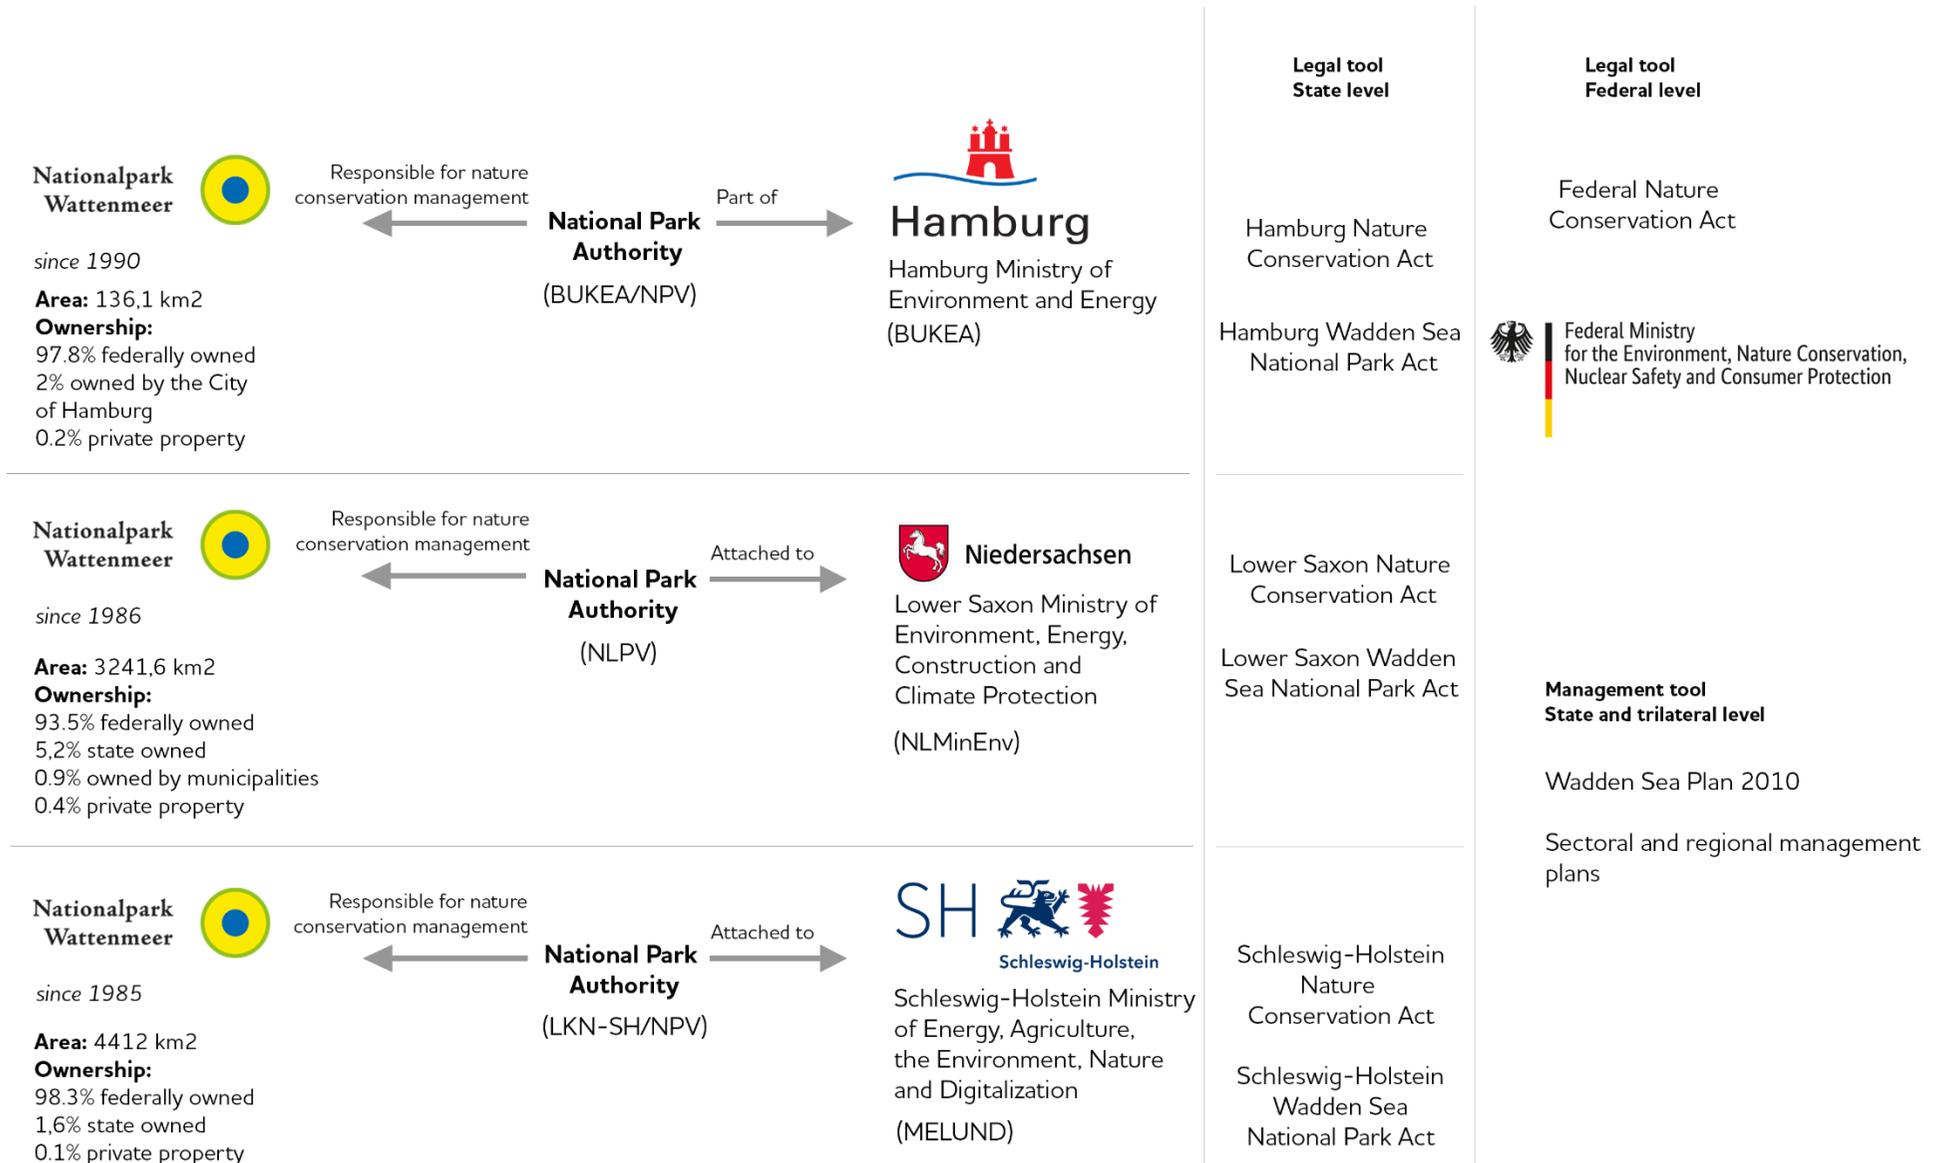

**Figure A.1.** Organisational structure of the Trilateral Wadden Sea Cooperation (TWSC). [**Note:** Pending on a WSB decision on the outcome of the evaluation of the pilot phase of the Partnership Hub by an external consultant, expertise is expected for early summer 2022].

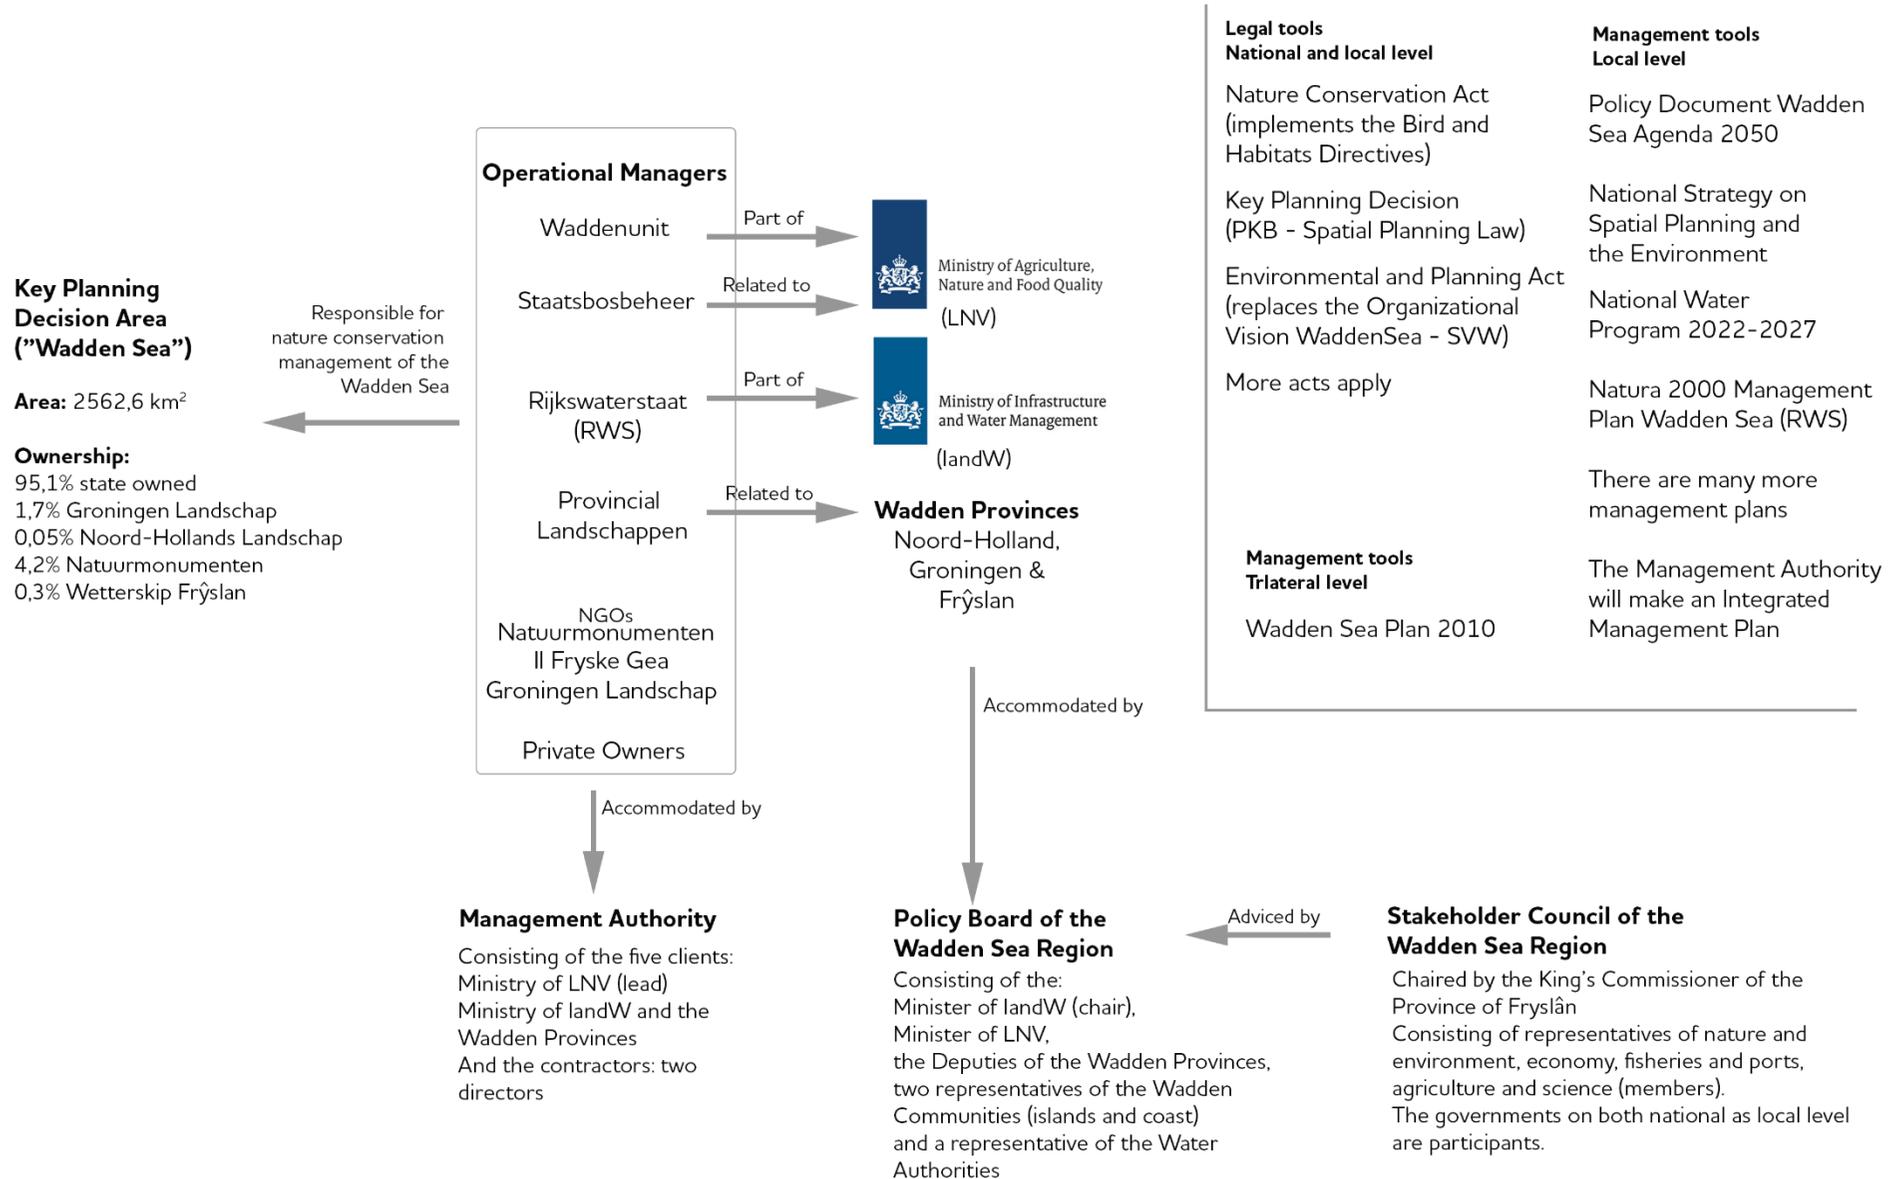

**Figure A.2.** Members, supporting organisations and advisors of the Wadden Sea Board. The supporting organisations are intricately involved in the task/expert/working groups of the TWSC and represent the link between policy and management.

**Figure A.3.** The Danish administration and management system for nature conservation management of the Wadden Sea. See further information in Section 3.2 National Administration and Management Systems.

**Figure A.4.** General management system of the Wadden Sea Cooperation Area/Nature Conservation Area is organised at the Federal State level as outlined in the Federal Nature Conservation Act. State National Park Authorities are the competent authority for the management and protection of each National Park. Each National Park Authority is part of or is attached to the respective State Ministry of Environment. Sites outside the National Parks are also managed by local authorities. Management is strongly supported by advisory boards and environmental NGOs and other partners from the civil society, including a network of “National Park-Partners”.

**Figure A.5.** The Management system of the Wadden Sea in the Netherlands (established in 2020) is comprised of the Management Authority responsible for the management of nature, fish and water, the Policy Board and the Stakeholder Council. NGOs, private owners, and organisations attached to the Ministries of LNV, landW and the Wadden Provinces are responsible for planning and management implementation at the operational level.

<sup>13</sup> **No-regret measures:** Measures which are beneficial independently of which event or scenario actually occurs. In cases of considerable uncertainty like climate change and its impacts regarding direction, timing and magnitude (e.g. plausible sea level rise projections vary among 0.2 and 1.4 m) no-regret measures provide some flexibility to adapt policy and management in response to new information regarding actual and projected changes in drivers and impacts. No regret' should also be applied concerning the natural values and the integrity of the Wadden Sea (CCAS, 2014).

<sup>14</sup> **Nature-based Solutions:** Nature-based Solutions are actions to protect, sustainably manage, and restore natural or modified ecosystems, which address societal challenges effectively and adaptively, simultaneously providing human well-being and biodiversity benefits (IUCN Global Standard for nature-based solutions, 2020).
